Pursuing Quality, Access, and Affordability Stephen C. Ehrmann, 2023-07-03 Whether they recognize it or not virtually all colleges and universities face three Grand Challenges Improve the learning outcomes of a higher education A large majority of college graduates are weak in capabilities that faculty and employers both see as crucial Extend more equitable access to degrees Too often students from underserved groups and poor households either don't enter college or else drop out without a degree The latter group may be worse off economically than if they'd never attempted college Make academic programs more affordable in money and time for students and other important stakeholder groups Many potential students believe they lack the money or time needed for academic success Many faculty believe they don't have time to make their courses and degree programs more effective Many institutions believe they can't afford to improve outcomes These challenges are global But in a higher education system such as that in the United States the primary response must be institutional This book analyzes how over the years six pioneering colleges and universities have begun to make visible cumulative progress on all three fronts

The Impact of Scale on Children's Spatial Thought Cathleen Heil, 2021-02-22 In this book Cathleen Heil addresses the question of how to conceptually understand children's spatial thought in the context of geometry education She proposes that in order to help children develop their abilities to successfully grasp and manipulate the spatial relations they experience in their everyday lives spatial thought should not only be addressed in written or tabletop settings at school Instead geometry education should also focus on settings involving real space such as during reasoning with maps In a first part of this book she theoretically addresses the construct of spatial thought at different scales of space from a cognitive psychological point of view and shows that maps can be rich sources for spatial thinking In a second part she proposes how to measure children's spatial thought in a paper and pencil setting and map based setting in real space In a third empirical part she examines the relations between children's spatial thought in those two settings both at a manifest and latent level

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken

during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

Handbook of Research on Facilitating Collaborative Learning Through Digital Content and Learning Technologies Keengwe, Jared, 2022-12-28 Digital content and learning technologies are now the norm at all levels of education However there is evidence to suggest that this digital shift is on a spectrum and the spectrum impacts learners in different ways This means that some instructors who seek to integrate digital content may do so using traditional teaching methods while others use innovative practices to engage learners Those who integrate innovative digital practices align their instructional practice with theories to facilitate student centered pedagogies that support and improve the depth and scope of student learning A primary characteristic of student centered learning is facilitating collaborative learning using digital content and learning technologies to engage students as well as to enhance meaningful learning The Handbook of Research on Facilitating Collaborative Learning Through Digital Content and Learning Technologies provides K 20 educators with alternative pedagogical and andragogical models that are innovative and incorporate digital content and learning technologies that promote constructive learning Further this book explores the relationship between constructivist learning digital content and learning technologies A primary argument in this book is that constructivist teaching strategies such as collaborative learning coupled with digital content and purposeful learning technologies could benefit student learning in ways that are different from those practiced in traditional non digital learning environments Covering topics such as instructional design self efficacy and library engagement this major reference work is an essential resource for pre service teachers teacher educators faculty and administrators of K 20 education librarians researchers and academicians
