Children's Books in Print, 1993 **Neural Network Modeling and Identification of Dynamical Systems** Yury Tiumentsev, Mikhail Egorchev, 2019-05-17 Neural Network Modeling and Identification of Dynamical Systems presents a new approach on how to obtain the adaptive neural network models for complex systems that are typically found in real world applications The book introduces the theoretical knowledge available for the modeled system into the purely empirical black box model thereby converting the model to the gray box category This approach significantly reduces the dimension of the resulting model and the required size of the training set This book offers solutions for identifying controlled dynamical systems as well as identifying characteristics of such systems in particular the aerodynamic characteristics of aircraft Covers both types of dynamic neural networks black box and gray box including their structure synthesis and training Offers application examples

of dynamic neural network technologies primarily related to aircraft Provides an overview of recent achievements and future needs in this area **Novel decision-making method based on bipolar neutrosophic information** Jianming

Zhan,Muhammad Akram,Muzzamal Sitara, In 1998 Smarandache originally considered the concept of neutrosophic set from philosophical point of view The notion of a single valued neutrosophic set is a subclass of the neutrosophic set from a scientific and engineering point of view and an extension of intuitionistic fuzzy sets A bipolar single valued neutrosophic set is an extension of a bipolar fuzzy set which provides us an additional possibility to represent uncertainty imprecise incomplete and inconsistent information existing in real situations In this research article we apply the concept of bipolar single valued neutrosophic sets to graph structures and present a novel framework for handling bipolar neutrosophic information by combining bipolar neutrosophic sets with graph structures Several basic notions concerning bipolar single valued neutrosophic graph structures are introduced and some related properties are investigated We also consider the applications of bipolar single valued neutrosophic graph structures in decision making In particular efficient algorithms are developed to solve decision making problems regarding recognition of each country s participation in its conspicuous relationships detection of psychological improvement of patients in a mental hospital and uncovering the undercover reasons for global terrorism **Subject Guide to Books in Print** ,1997 **Hokkaido Mathematical Journal** ,2007

Bilevel Optimization Stephan Dempe, Alain

Zemkoho,2020-11-23 2019 marked the 85th anniversary of Heinrich Freiherr von Stackelberg's habilitation thesis *Marktform und Gleichgewicht* which formed the roots of bilevel optimization. Research on the topic has grown tremendously since its introduction in the field of mathematical optimization. Besides the substantial advances that have been made from the perspective of game theory, many sub fields of bilevel optimization have emerged concerning optimal control, multiobjective optimization, energy and electricity markets management, science, security and many more. Each chapter of this book covers a specific aspect of bilevel optimization that has grown significantly or holds great potential to grow and was written by top experts in the corresponding area. In other words, unlike other works on the subject, this book consists of surveys of different topics on bilevel optimization. Hence, it can serve as a point of departure for students and researchers beginning their research journey or pursuing related projects. It also provides a unique opportunity for experienced researchers in the field to learn about the progress made so far and directions that warrant further investigation. All chapters have been peer reviewed by experts on mathematical optimization.
