des droits et devoirs. À ces questions et à d'autres qui y sont liées, le présent ouvrage apporte quelques éléments de réponse. C'est le résultat d'un colloque tenu à Cotonou en octobre 2006 sur le thème Savoirs traditionnels et science moderne. Il est dédié à la mémoire de Georg Elwert, africaniste allemand disparu en 2005 dont les travaux sur le Bénin, l'Afrique et le Tiers Monde restent une source d'inspiration pour beaucoup.

How are the old and the new expressed in the field of knowledge and know how? What did we know yesterday and what do we know today? What was yesterday and what is today the mythical part in what we believe we know? And how do we define in each case the core of concrete and universally valid knowledges? What rights and duties do we acclaim as human beings, as women, as children, as peoples or nations, and what understanding do we today have of these rights and duties? What is the impact of what we today call globalisation on the evolution of knowledge, know how, and the awareness of such rights and duties? To these questions and to other related ones, this book provides some answers. It is the result of a conference held in Cotonou in October 2006 on the theme Traditional knowledges and modern science. It is dedicated to the memory of Georg Elwert, a German Africanist who passed away in 2005 and whose work on Benin, Africa and the Third World remains a source of inspiration for many.

ATTITUDES TOWARDS MATHEMATICS AND MATHEMATICAL ACHIEVEMENT IN SECONDARY SCHOOLS IN ENGLAND: EXPLORING THE ROLE OF SOCIAL CLASS, GENDER AND ETHNICITY Jeffery Quaye, 2020-02-02 This book is essential reading in the sociology of education, social policy and mathematics education. It is for teachers, principals, superintendents, school leaders and policymakers. For too long many children have not achieved their best potential in mathematics at both primary and secondary schools. Although scholarly interest in students' attitudes towards mathematics and achievement in mathematics has increased, there is scant research which explores the explanatory potential of Bourdieu's trilogy of habitus, cultural capital and social field in investigating students' attitudes towards mathematics. The content is based on a rich empirical study of 1106 students aged 14-16 and gives a detailed account drawing on both quantitative and qualitative data to show the intersection of social class, gender and ethnicity on students' aspiration, attitudes towards mathematics and mathematical achievement at GCSE in secondary schools in England.

Numbers Robert Kiely, 2022-08-04 *Numbers: A Cultural History* provides students with a compelling interdisciplinary view of the development of mathematics and its relationship to world cultures over 4,500 years of human history. Mathematics is often referred to as a universal language and that is a fitting description. Many cultures have contributed to mathematics in fascinating ways, but despite its universal character, mathematics is also a human endeavor. It has played pivotal roles in societies at particular times and it has influenced and been influenced by a wide range of ideas and institutions, from commerce to philosophy. Ancient Egyptian views of mathematics, for example, are tied closely to engineering and agriculture. Some European Renaissance views, on the other hand, relate the study of number to that of the natural world. *Numbers: A Cultural History* seeks to place the history of mathematics into a broad cultural context. While it treats mathematical material in detail, it also relates that material to other subject matter: science, philosophy, navigation.
