Mathematics and Technology Gilles Aldon, Fernando Hitt, Luciana Bazzini, Uwe Gellert, 2017-04-05 This volume collects most recent work on the role of technology in mathematics education It offers fresh insight and understanding of the many ways in which technological resources can improve the teaching and learning of mathematics. The first section of the volume focuses on the guestion how a proposed mathematical task in a technological environment can influence the acquisition of knowledge and what elements are important to retain in the design of mathematical tasks in computing environments The use of white smart boards platforms as Moodle tablets and smartphones have transformed the way we communicate both inside and outside the mathematics classroom Therefore the second section discussed how to make efficient use of these resources in the classroom and beyond The third section addresses how technology modifies the way information is transmitted and how mathematical education has to take into account the new ways of learning through connected networks as well as new ways of teaching The last section is on the training of teachers in the digital era The editors of this volume have selected papers from the proceedings of the 65th 66th and 67th CIEAEM conference and invited the correspondent authors to contribute to this volume by discussing one of the four important topics. The book continues a series of sourcebooks edited by CIEAEM the Commission Internationale pour l tude et l Am lioration de l Enseignement des Math matiques International Commission for the Study and Improvement of Mathematics Education Exploring Math with Technology Allison W. McCulloch, Jennifer N. Lovett, 2023-08-01 This timely book provides support for secondary mathematics teachers learning how to enact high quality equitable math instruction with dynamic mathematics specific technologies Using practical advice from their own work as well as from interviews with 23 exceptional technology using math teachers the authors develop a vision of teaching with technology that positions all students as powerful doers of mathematics using math specific technologies e g dynamic graphing and geometry applications data exploration tools computer algebra systems virtual manipulatives Each chapter includes sample tasks advice from technology using math teachers and guiding questions to help teachers with implementation The book offers a rich space for secondary math teachers to explore important pedagogical practices related to teaching with technology combined with broader discussions of changing the narratives about students emphasizing the mathematics they can do and the mathematics they deserve Accompanying online support materials include video vignettes of teachers and students interacting around technology enhanced tasks in the classroom as well as examples of more than 30 high quality technology enhanced tasks College Mathematics for Technology Cheryl S. Cleaves, Margie Hobbs, Paul Dudenhefer, 1999-10-12 College Mathematics for Technology Fifth Edition is an introductory technical math text that covers arithmetic algebra geometry and trigonometry Topics in these areas are introduced and reinforced using a step by approach and are supported by numerous examples The approach to presenting the concepts examples and applications supports the standards set by AMATYC The American
