Mathematics and the Image of Reason Mary Tiles, 2013-01-11 A thorough account of the philosophy of mathematics In a cogent account the author argues against the view that mathematics is solely logic **Issues and Images in the Philosophy of Science** D. Ginev, Robert S. Cohen, 2012-12-06 Azarya Polikarov was born in Sofia on October 9 1921 Through the many stages of politics economy and culture in Bulgaria he maintained his rational humanity and scientific curiosity He has been a splendid teacher and an accomplished critical philosopher exploring the conceptual and historical vicissitudes of physics in modern times and also the science policies that favor or threaten human life in these decades Equally and easily at home both within the Eastern and Central European countries and within the Western world Polikarov is known as a collaborating genial colleague a working scholar not at all a visiting academic tourist He understands the philosophy of science from within in all its developments from the classical beginnings through the great ages of Galilean Newtonian Maxwellian science to the times of the stunning discoveries and imaginative theories of his beloved Einstein and Bohr of the twentieth century Moreover his understanding has come along with a deep knowledge of the scientific topics in themselves Looking at our Appendix listing his principal publications we see that Polikarov's public research career after years of science teaching and popular science writing began in the fifties in Bulgarian Russian and German journals

Philosophical Theories of Probability Donald Gillies, 2012-09-10 The Twentieth Century has seen a dramatic rise in the use of probability and statistics in almost all fields of research This has stimulated many new philosophical ideas on probability Philosophical Theories of Probability is the first book to present a clear comprehensive and systematic account of these various theories and to explain how they relate to one another Gillies also offers a distinctive version of the propensity theory of probability and the intersubjective interpretation which develops the subjective theory Christianity and the Images of Science Granville C. Henry, 1998 The relationship of Christianity to science can best be handled by isolating images of science that influence Christianity Henry defines and then reformulates those images making science more intelligible and Christianity more biblical **Theories of Consciousness** William Seager, 2002-01-31 The most remarkable fact about the universe is that certain parts of it are conscious Somehow nature has managed to pull the rabbit of experience out of a hat made of mere matter Making its own contribution to the current lively debate about the nature of consciousness Theories of Consciousness introduces variety of approaches to consciousness and explores to what extent scientific understanding of consciousness is possible Including discussion of key figures such as Descartes Fodor Dennett and Chalmers the book covers identity theories representational theories intentionality externalism and the new information based theories Metaphysics of Consciousness William Seager, 2002-09-11 Metaphysics of Consciousness opens with a development of the physicalist outlook that denies the need for any explanation of the mental This inexplicability is demonstrated not to be sufficient as refutation of physicalism However the inescapable particularity of modes of

consciousness appears to overpower this minimal physicalism This book proposes that such an inference requires either a wholly new conception of how consciousness is physical or a deep and disturbing new kind of physical inexplicability

Living in a Technological Culture Hans Oberdiek,Mary Tiles,2005-11-02 Technology is no longer confined to the laboratory but has become an established part of our daily lives Its sophistication offers us power beyond our human capacity which can either dazzle or threaten it depends who is in control Living in a Technological Culture challenges traditionally held assumptions about the relationship between man and machine It argues that contemporary science does not shape technology but is shaped by it Neither discipline exists in a moral vacuum both are determined by politics rather than scientific inquiry By questioning our existing uses of technology this book opens up wider debate on the shape of things to come and whether we should be trying to change them now As an introduction to the philosophy of technology this will be valuable to students but will be equally engaging for the general reader *Subject Guide to Books in Print* ,1997 **EPSA**

Images Brian Greer,David Kollosche,Ole Skovsmose,2024-12-11 Mathematics is an activity something we do not just something inert that we study This rich collection begins from that premise to explore the various social influences institutional forces and lived realities that shape and mould the study and practice of mathematics and are moulded by it in turn These twenty one essays explore questions of mathematics as a topic of philosophy but also the nature and purpose of mathematics education and the role of mathematics in moulding citizens It challenges the biases and prejudices inherent within uninformed histories of mathematics including problems of white supremacy the denial of cultural difference and the global homogenization of teaching methods In particular the book contrasts the effectiveness of mathematics and science in modelling physical phenomena and solving technical problems with its ineffectiveness in modelling social phenomena and solving human problems and urges us to consider how mathematics might better meet the urgent crises of our age The book addresses anybody who is interested in reflecting on the role of mathematics in society from different perspectives It allows mathematicians to ponder about the cultural connections of mathematics and provides new perspectives for philosophical sociological and cultural studies of mathematics Because of the book s emphasis on education in mathematics it is especially interesting for mathematics teachers and teacher educators to challenge their understanding of the subject Nietzsche, Epistemology, and Philosophy of Science B.E. Babich,2013-03-09 Nietzsche Epistemology and Philosophy of Science is the

Psychological Knowledge Martin Kusch, 2005-10-05 Psychologists and philosophers have assumed that psychological knowledge is knowledge about and held by the individual mind Psychological Knowledge challenges these views It argues that bodies of psychological knowledge are social institutions like money or the monarchy and that mental states are social artefacts like coins or crowns Martin Kusch takes on arguments of alternative proposals shows what is wrong with them and demonstrates how his own social philosophical approach constitutes an advance We see that there exists a substantial natural amount of philosophical theorising a body of work that tries to determine the nature and structure of folk psychology An introduction to the workings of constructivism Psychological Knowledge is an insightful introduction to the history of psychology and the recent philosophy of mind

Platonism, Naturalism, and Mathematical Knowledge James Robert Brown, 2013-06-17 This study addresses a central theme in current philosophy Platonism vs Naturalism and provides accounts of both approaches to mathematics crucially discussing Quine Maddy Kitcher Lakoff Colyvan and many others Beginning with accounts of both approaches Brown defends Platonism by arguing that only a Platonistic approach can account for concept acquisition in a number of special cases in the sciences He also argues for a particular view of applied mathematics a view that supports Platonism against Naturalist alternatives Not only does this engaging book present the Platonist Naturalist debate over mathematics in a comprehensive fashion but it also sheds considerable light on non mathematical aspects of a dispute that is central to contemporary philosophy
