Mathematical Diversions from Scientific American Martin Gardner,2020-10-06 Martin Gardner's Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists Gardner in his crystal clear prose illuminated corners of mathematics especially recreational mathematics that most people had no idea existed His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him These columns were both a revelation and a gift when he wrote them no one before Gardner had written about mathematics like this They continue to be a marvel This is the original 1971 edition and contains columns published in the magazine from 1963 1965 **Mathematical Reasoning** Raymond Nickerson,2011-02-25 The development of mathematical competence both by humans as a species over millennia and by individuals over their lifetimes is a fascinating aspect of human cognition This book explores when and why the rudiments of mathematical capability first appeared among human beings what its fundamental concepts are and how and why it has grown into the richly branching complex of specialties that it is today It discusses whether the truths of mathematics are discoveries or inventions and what prompts the emergence of concepts that appear to be descriptive of nothing in human experience Also covered is the role of esthetics in mathematics What exactly are mathematicians seeing when they describe a mathematical entity as beautiful There is discussion of whether mathematical disability is distinguishable from a general cognitive deficit and whether the potential for mathematical reasoning is best developed through instruction This volume is unique in the vast range of psychological questions it covers as revealed in the work habits and products of numerous mathematicians It provides fascinating reading for researchers and students with an interest in cognition in general and mathematical cognition in particular Instructors of mathematics will also find the book's insights illuminating *Ethnomathematics* Arthur B. Powell,Marilyn Frankenstein,1997-04-17 Presents the emerging field of ethnomathematics from a critical perspective challenging particular ways in which Eurocentrism permeates mathematics education and mathematics in general

Circular ,1965 *Mathematically Speaking* C.C. Gaither,Alma E Cavazos-Gaither,1998-01-01 For the first time a book has brought together in one easily accessible form the best expressed thoughts that are especially illuminating and pertinent to the discipline of mathematics Mathematically Speaking A Dictionary of Quotations provides profound wise and witty quotes from the most famous to the unknown You may not find all the quoted jewels that exist but you will definitely a great many of them here The extensive author and subject indexes provide you with the perfect tools for locating quotations for practical use or pleasure and you will soon enjoy discovering what others have said on topics ranging from addition to zero This book will be a handy reference for the mathematician or scientific reader and the wider public interested in who has

said what on mathematics *The Publishers Weekly* ,1890 *Relatively and Philosophically Earnest* Bharath Sriraman,Simon Goodchild,2009-10-01 Paul Ernest's name is synonymous with social constructivism as a philosophy of mathematics. His contributions to mathematics education have occurred at a very fundamental level and to a extent shaped theory development in this field. His research addresses fundamental questions about the nature of mathematics and how it relates to teaching learning and society. For the last three decades Paul has been a prolific scholar who has published in a wide array of topics such as the relationship between the philosophy of mathematics and mathematics education and more generally the philosophy of mathematics education ethics and values in mathematics education and the philosophy of research methodology. The title of this Festschrift is meant to be a pun to convey the sometimes relativistic dimension to mathematical certainty that Paul argued for in developing his philosophy and also a play on words for the fact that absolute earnestness may perhaps be a Platonic construct and not possible in the realm of language and human discourse. Paul Ernest's scholarly evolution and life can best be summarized in the words of Walt Whitman: Do I contradict myself? Very well then I contradict myself. I am large, I contain multitudes. Indeed his presence has been large and multitudinous and this Festschrift celebrates his 65th Birthday with numerous contributions coming from the mathematics philosophy and mathematics education communities around the world.

3.1416 And All That DAVIS,CHINN,2012-12-06 LYTTON STRACHEY tells the following story: In intervals of relaxation from his art the painter Degas used to try his hand at writing sonnets. One day while so engaged he found that his inspiration had run dry. In desperation he ran to his friend Mallarmé who was a poet. My poem won't come out he said and yet I'm full of excellent ideas. My dear Degas Mallarmé retorted poetry is not written with ideas it is written with words. If we seek an application of Mallarmé's words to mathematics we find that we shall want to turn his paradox around. We are led to say that mathematics does not consist of formulas it consists of ideas. What is platitudinous about this statement is that mathematics of course consists of ideas. Who but the most unregenerate formalist asserting that mathematics is a meaningless game played with symbols would deny it? What is paradoxical about the statement is that symbols and formulas dominate the mathematical page and so one is naturally led to equate mathematics with its formulas.
