First Course in Mathematical Logic Patrick Suppes, Shirley A. Hill, 2002-01-01 Starting with symbolizing sentences and sentential connectives this work proceeds to the rules of logical inference and sentential derivation examines the concepts of truth and validity and presents a series of truth tables Subsequent topics include terms predicates and universal quantifiers universal specification and laws of identity axioms for addition and universal generalization 1964 edition Index **What is Mathematical Logic?** John N. Crossley, 1990-01-01 This introduction to the main ideas and results of mathematical logic is a serious treatment geared toward non logicians Starting with a historical survey of logic in ancient times it traces the 17th century development of calculus and discusses modern theories including set theory the continuum hypothesis and other ideas 1972 edition What is Mathematical Logic?, 1990 **Logic for Mathematicians** J. Barkley Rosser, 2008-12-18 Examination of essential topics and theorems assumes no background in logic Undoubtedly a major addition to the literature of mathematical logic Bulletin of the American Mathematical Society 1978 edition Mathematical Logic and the Foundations of Mathematics G. T. Kneebone, 1963 **Mathematical Logic** Stephen Cole Kleene, 2002-01-01 Undergraduate students with no prior instruction in mathematical logic will benefit from this multi part text Part I offers an elementary but thorough overview of mathematical logic of 1st order Part II introduces some of the newer ideas and the more profound results of logical research in the 20th century 1967 edition *First Order Mathematical Logic* Angelo Margaris, 1990-01-01 Attractive and well written introduction Journal of Symbolic Logic The logic that mathematicians use to prove their theorems is itself a part of mathematics in the same way that algebra analysis and geometry are parts of mathematics This attractive and well written introduction to mathematical logic is aimed primarily at undergraduates with some background in college level mathematics however little or no acquaintance with abstract mathematics is needed Divided into three chapters the book begins with a brief encounter of naive set theory and logic for the beginner and proceeds to set forth in elementary and intuitive form the themes developed formally and in detail later In Chapter Two the predicate calculus is developed as a formal axiomatic theory The statement calculus presented as a part of the predicate calculus is treated in detail from the axiom schemes through the deduction theorem to the completeness theorem Then the full predicate calculus is taken up again and a smooth running technique for proving theorem schemes is developed and exploited Chapter Three is devoted to first order theories i e mathematical theories for which the predicate calculus serves as a base Axioms and short developments are given for number theory and a few algebraic theories Then the metamathematical notions of consistency completeness independence categoricity and decidability are discussed The predicate calculus is proved to be complete The book concludes with an outline of Godel's incompleteness theorem Ideal for a one semester course this concise text offers more detail and mathematically relevant examples than those available in elementary books on logic Carefully chosen exercises with selected answers help students test their grasp of the material For any student of mathematics logic or the
