Mathematics For Elementary School Teachers A Process Approach:

Mathematics for Elementary School Teachers: A Process Approach Mark A. Freitag, 2013-01-01 Freitag's MATHEMATICS FOR ELEMENTARY SCHOOL TEACHERS A PROCESS APPROACH was developed using the five Content Standards from the NCTM Principles and Standards for School Mathematics and the Common Core State Standards for Mathematics. Traditionally books for pre service elementary teachers have focused on problem solving. However problem solving is not the only process through which mathematics is learned. It is also learned through mathematical reasoning, communication, representation, and connections. Recent trends in mathematics education now advocate implementing all five processes as a vital part of learning and doing mathematics. Consequently you need to have concrete experiences with these processes that you will be required to teach. The goal of this book is to treat each of the processes equitably by using an approach in which the five processes serve as the central pedagogical theme. Most of the examples, exercises, and activities are designed to either model the processes or to directly engage you in working with them. As a result you will not only come to understand the different processes but also appreciate them as an integral to learning and doing mathematics. If this broader view can be instilled, you are more likely to give your students a more well rounded and holistic view of mathematics once you enter the classroom. The content of the book is directly related to the mathematics that is taught in grades K-8. The purpose is not to reteach elementary mathematics. Rather the intent is to look at the content from a theoretical or generalized point of view so that you can better understand the concepts and processes behind the mathematics you will teach. In short the book focuses on the why behind the mathematics in addition to the how. Available with InfoTrac Student Collections <http://go.cengage.com/infotrac>.
