The Psychology of Magic and the Magic of Psychology Amir Raz, Jay A. Olson, Gustav Kuhn, 2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic

effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception

Experiencing the Impossible Gustav Kuhn, 2019-03-12 This thought provoking tour through the science of magic will make you question what you know about your brain and your reality A psychologist and magician shows how the scientific study of magic reveals intriguing and often unsettling insights into the mysteries of the human mind What do we see when we watch a magician pull

a rabbit out of a hat or read a person's mind. We are captivated by an illusion; we applaud the fact that we have been fooled. Why do we enjoy experiencing what seems clearly impossible or at least beyond our powers of explanation? In *Experiencing the Impossible*, Gustav Kuhn examines the psychological processes that underpin our experience of magic. Kuhn, a psychologist and a magician, reveals the intriguing and often unsettling insights into the human mind that the scientific study of magic provides. Magic, Kuhn explains, creates a cognitive conflict between what we believe to be true—for example, a rabbit could not be in that hat—and what we experience: a rabbit has just come out of that hat. Drawing on the latest psychological, neurological, and philosophical research, he suggests that misdirection is at the heart of all magic tricks and he offers a scientific theory of misdirection. He explores, among other topics, our propensity for magical thinking, the malleability of our perceptual experiences, forgetting and misremembering, free will and mind control, and how magic is applied outside entertainment: the use of illusion in human-computer interaction, politics, warfare, and elsewhere. We may be surprised to learn how little of the world we actually perceive, how little we can trust what we see and remember, and how little we are in charge of our thoughts and actions. Exploring magic, Kuhn illuminates the complex and almost magical mechanisms underlying our daily activities.

[Grimoire For The Apprentice Wizard](#) Oberon Zell-Ravenheart, 2004-02-04. Here is the book Merlin could have given a young Arthur if only it had existed. Out of the millions of Harry Potter fans worldwide, there are tens of thousands who want to really do the magical things J.K. Rowling writes about. But would-be wizards must rely on information passed down from wizard elders. Is there a Hogwarts anywhere in the real world? A real Albus Dumbledore? Where is the book these aspiring wizards need? Luckily for all those fans, Oberon Zell-Ravenheart, today's foremost genuine wizard, has written the essential handbook. What's more, he has gathered some of the greatest names in Wicca, including Ellen Evert Hopman, Raymond Buckland, Raven Grimassi, Patricia Telesco, Jesse Wolf Hardin, Morning Glory Zell-Ravenheart, and many more, into a modern-day Grey Council to publish for the first time everything an aspiring wizard needs to know. Lurking within the pages of *Grimoire for the Apprentice Wizard* are biographies of famous wizards of history and legend, detailed descriptions of magical tools and regalia with full instructions for making them, rites and rituals for special occasions, a bestiary of mythical creatures, the laws of magic, myths and stories of gods and heroes, lore and legends of the stars and constellations, instruction for performing amazing illusions, special effects, and many other wonders of the magical multiverse. Praise for *Grimoire for the Apprentice Wizard*: I can't think of a better, more qualified person to write a Handbook for Apprentice Wizards. Oberon is a wizard. Raymond Buckland, author of *Buckland's Complete Book of Witchcraft*, Oberon is not only extremely learned in the magical arts but he communicates that knowledge with wit and charm. Fiona Horne, author of *Witch: A Magical Journey* and star of *Mad, Mad, Mad House*.
