

1) Answer: C

Explanation: When you roll two fair six-sided dice, the sample space of the event will have 36 elements since both dice have six possible outcomes ($6 \times 6 = 36$).

The elements of the sample space where the numbers are equal are as follows:

- (1, 1) - this means that the first die results in 1 dot and the second die results in 1 dot.
- (2, 2) - this means that the first die results in 2 dots and the second die results in 2 dots.
- (3, 3) - this means that the first die results in 3 dots and the second die results in 3 dots.
- (4, 4) - this means that the first die results in 4 dots and the second die results in 4 dots.
- (5, 5) - this means that the first die results in 5 dots and the second die results in 5 dots.
- (6, 6) - this means that the first die results in 6 dots and the second die results in 6 dots.

There are 6 total outcomes where the resulting numbers of the dice are equal.

Using the formula for theoretical probability:

$$\text{Probability} = \frac{\text{number of favorable outcomes}}{\text{total number of outcomes}} = \frac{6}{36} = \frac{1}{6}$$

Thus, the answer is $\frac{1}{6}$.

2) Answer: B

Explanation: Obtaining a queen and a spade in a standard deck of cards is a non-mutually exclusive event since it is possible to obtain a card that is both a queen and a spade at the same time (i.e., queen of spades).

We are tasked to find the probability of picking a card that is either a queen or a spade. Take note of the word "or." This means we are looking for the probability of the event that we pick a queen or a spade from the deck of cards.

The formula for the probability that either one of two non-mutually exclusive events to happen is:

$$P(\text{queen or spade}) = P(\text{queen}) + P(\text{spade}) - P(\text{intersection of queen and spade})$$
