**Karanapaddhati of Putumana Somayāji** Venketeswara Pai,K. Ramasubramanian,M.S. Sriram,M.D. Srinivas,2018-03-14 This book is an important text of the Kerala school of astronomy and mathematics probably composed in the 16th century In the Indian astronomical tradition the kara a texts are essentially computational manuals and they often display a high level of ingenuity in coming up with simplified algorithms for computing planetary longitudes and other related quantities Kara apaddhati however is not a kara a text Rather it discusses the paddhati or the rationale for arriving at suitable algorithms that are needed while preparing a kara a text for a given epoch Thus the work is addressed not to the almanac maker but to the manual maker Kara apaddhati presents the theoretical basis for the v kya system where the true longitudes of the planet are calculated directly by making use of certain auxiliary notions such as the kha a ma ala and dhruva along with tabulated values of changes in the true longitude over certain regular intervals which are expressed in the form of v kyas or mnemonic phrases The text also discusses the method of vallyupasa h ra which is essentially a technique of continued fraction expansion for obtaining optimal approximations to the rates of motion of planets and their anomalies involving ratios of smaller numbers It also presents a new fast convergent series for which is not mentioned in the earlier works of the Kerala school As this is a unique text presenting the rationale behind the v kya system and the computational procedures used in the kara a texts it would serve as a useful companion for all those interested in the history of astronomy The authors have provided a translation of the text followed by detailed notes which explain all the computational procedures along with their rationale by means of diagrams and equations
