**Identification of Practices, Design, Construction, and Repair Using Trenchless Technology**, 2010 Trenchless technologies are methods used for the construction and rehabilitation of underground utility pipes These methods are growing increasingly popular due to their versatility and their potential to lower project costs However the use of trenchless technologies in Iowa and their effects on surrounding soil and nearby structures has not been adequately documented Surveys of and interviews with professionals working in trenchless related industries in Iowa were conducted and the results were analyzed and compared to survey results from the United States as a whole The surveys focused on method familiarity pavement distress observed reliability of trenchless methods and future improvements Results indicate that the frequency of pavement distress or other trenchless related issues are an ongoing problem in the industry Inadequate soil information and quality control quality assurance QC QA are partially to blame
