Ecological Validity of Neuropsychological Testing Robert J. Shordone, Charles Long, 1996-01-11 Ecological validity the functional and predictive relationship between a patient s performance on a set of neuropsychological tests and their behavior in a variety of real world settings is emerging as a powerful tool Since neuropsychological data were not designed to be ecologically valid attempts to use the data in such a manner have been filled with pitfalls The authors present a strong argument for reevaluating existing tests and or developing new measurements Special attention is given to specific functions such as the cognitive constructs of attention perception working memory language and executive function Additional consideration is given to the assessment of special populations children minorities substance abusers elderly and emotionally disturbed neurological populations One area in which neuropsychology can lend tremendous assistance is in predicting a client s ability to resume activities of daily living but more important when a client can return to work Ecological Validity of Neuropsychological Testing covers this issue extensively and details the role of vocational rehabilitation and the lack of exposure many within neuropsychology have to these specific needs of their clients

Learning Disability Subtyping Stephen R. Hooper, W. Grant Willis, 2013-11-11 The publication of this very important volume comes at a timely juncture in the history of learning disabilities The focus of this volume is on developing a multidisciplinary understanding of the complexities of the research on learning disabilities and its various sUbtypes It also will serve as an important compendium of the subtyping literature particularly with respect to pertinent issues of nosology specific sUbtotyping models neuro psychological diagnosis and treatment As the authors so correctly suggest the differential diagnosis of learning disabilities subtypes is a critical first step in developing theoretically sound programs of psychoeducational intervention Clearly one must have some idea about the general abilities of a child before realistic expectations can be charted Also how can one plan a program of intervention without some knowledge of the deficient components of achievement within a do main Does it not make both conceptual and practical sense to identify an individual s relative strengths and weaknesses so that abilities or strengths can be utilized to optimize functioning in areas of deficit Although these all sound like reasonable precursors to assisting individuals in need of academic assistance there are those who would argue otherwise Impor tantly however the

Director of the National Institutes of Health in a recent report to Congress advocates exactly what this volume proposes. Indeed, there are important needs to be addressed and the literature reviewed herein strongly supports the conclusions drawn by these authors.
