The Geography of Finance Gordon L. Clark, Dariusz Wójcik, 2007-05-03 Publisher description *The Political Economy of Financial Market Regulation* Peter Mooslechner, 2006 In this very nice volume reputed academics and central bankers discuss recent regulatory reforms in financial governance from a political economy perspective Therefore it is invaluable for both policymakers and scholars interested in financial governance and market regulation Sylvester C W Eijffinger Tilburg University The Netherlands Centre for Economic Policy Research UK and CESifo Research Network Munich Germany This book focuses on recent financial market reforms and their implications for social economic and political exclusion In particular it considers the hitherto under researched question of whose interests govern the design of regulatory mechanisms and who influences the decision making process This process is set out as contested terrain in which there are winners and losers and in which there are inevitably circles of exclusion The authors comprising financial authority experts and academic specialists expand the concept of exclusion beyond its typical social dimension to incorporate all actors be they individuals or institutions not permitted to contribute to financial market regulation as a public good As they point out this may take the form of political economic or indeed cultural exclusion The book examines the conflicts that arise between various interests and how these are managed within the process of regulation

The Changing Landscape of Global Financial Governance and the Role of Soft Law Friedl Weiss, Armin

Kammel, 2015-05-26 The Changing Landscape of Global Financial Governance and the Role of Soft Law provides interdisciplinary perspectives on the changing landscape of global financial governance by exploring the impact and role of soft law directly or as a precursor of hard law pertaining to financial governance. Since the shaping of financial governance impacts national, regional and global levels of regulation, different views and arguments contribute to the ongoing discussions about financial regulation. Against this background, this book brings together perspectives of economists and lawyers who have not rallied to one or the other popular call for more regulation as a panacea for the prevention of future global financial crises. Calls which have all but drowned out more nuanced scientific debates. Instead, their analysis of aspects of remedial regulatory policy prescriptions already made or proposed demonstrates that carefully designed soft law can be deployed as a valuable method or tool of mediation between the unrestrained autonomy of dysfunctional markets and overzealously crafted hard law.

Rewiring Financial Markets For Good Charles Moore, The digital revolution post pandemic will lead to a radical departure from the traditional model of monetary exchange. The creation of a Digital Financial Market Infrastructure will underpin the unbundling and re-bundling of the functions of money within society. Although digital money itself is not new to modern economies, digital legal tender DLT facilitates instantaneous peer to peer transfers of value in a way that today is impossible. The importance of digital connectedness will often supersede the importance of macroeconomic links and lead to the establishment of Digital Financial Markets linking the currency to membership of a particular financial market rather than to a specific country. Capitalism underpins wealth generation and hence the existence of a digital financial market. Capitalism is an economic system in which private individuals or corporations own and control the flow of capital throughout society. Capitalism is built on the idea that compensation and profits derived from capital allocations reflect the relative contribution an individual or firm makes from the utilisation of capital to the total wealth of a society. The genius of capitalism lies in its ability to produce organic answers to most problems of scarcity and resource allocation. Markets tend naturally to reward the ideas that prove most useful and to penalize dysfunctional behaviour. They can bring about broad based outcomes that states cannot by driving vast numbers of individuals to adjust their behaviour in response to price signals. Capital is the defining feature of modern economies that transforms mere wealth into an asset that creates more wealth. Capital is the lifeblood of capitalist societies yet capital unequal distribution throughout the community codifies the widening wealth gap between the holders of capital and everybody else.
