## **Governance Of Science Issues In Society:**

**Governance as a Dialogue: Government-Society-Science in Transition** Anthony R. Turton, Johanna Hanlie Hattingh, Gillian A. Maree, Dirk J. Roux, Marius Claassen, Wilma F. Strydom, 2007-02-16 The last two decades have been marked by a dramatic increase in global attention to the concept of governance especially in relation to the effective and sustainable management of natural resources During this period issues of water governance have received particular attention for example in relation to the provision of reliable water supplies as a catalyst for poverty eradication Within the context of the Millennium Development Goals and against a backdrop of an increasing frequency of water crises ranging from widespread flooding to severe water scarcity it is essential that each country and particularly those countries that face development challenges should be in a position to ensure that access to water is available to those who need it most This issue has been highlighted by the Global Water Partnership which stated that the water crisis facing the world is in reality a crisis of governance The South African political environment has changed dramatically in recent years and the central concepts of social equity and the right to a healthy environment are now entrenched in the country's Constitution These concepts are supported by several new laws in particular the National Environmental Management Act and the National Water Act which in turn are based on the principles of sustainable development However despite the highly desirable attributes of these landmark pieces of legislation South African authorities are still struggling to implement the requirements of these Acts almost a decade after their promulgation *The governance of science* Steve Fuller, 2000 **Science, Technology and Global Governance** John R. De La Mothe, 2014-04-23 Science technology and innovation have long been key factors in the competitive advantage of nations Today however the new international political economy is being increasingly driven by science and technology in new ways Integration globalization and internationalization have all become watchwords for a series of dynamic processes in which science and technology are deeply implicated As a result not only are the policies of national governments being exposed in terms of the limits of their sovereignty but science and technology are being increasingly implicated in a wide array of public issues ranging from security privacy development and economic growth to employment environment foreign policy and geopolitics Clearly in today's emerging world the ways in which governments organize their science and technology policy their science and technology intelligence and their research advisory structures and resources matter more today than ever before In turn the contract between science and democracy is being rapidly redefined This book is the first to comprehensively discuss these critical issues **Governance of Science** Steve Fuller, 1999-12-16 What does social and political theory have to say about the role of science in society Do scientists and other professional enquirers have an unlimited right to be wrong What are the implications of capitalism and multiculturalism for the future of the university This ground breaking text offers a fresh perspective on the governance of science from the standpoint of social and political theory Science has often been seen as the only institution that embodies

the elusive democratic ideal of the open society Yet science remains an elite activity that commands much more public trust than understanding even though science has become increasingly entangled with larger political and economic issues Fuller proceeds by rejecting liberal and communitarian ideologies of science in favour of a republican approach centred on the right to be wrong He shows how the recent scaling up of scientific activity has undermined the republican ideal The centrepiece of the book a social history of the struggle to render the university a republic of science focuses on the potential challenges posed by multiculturalism and capitalism Finally drawing on the science policy of the US New Deal Fuller proposes nothing short of a new social contract for secularizing science

**Science, Technology and Governance** John De la Mothe, 2001 This anthology examines Love's Labours Lost from a variety of perspectives and through a wide range of materials Selections discuss the play in terms of historical context dating and sources character analysis comic elements and verbal conceits evidence of authorship performance analysis and feminist interpretations Alongside theater reviews production photographs and critical commentary the volume also includes essays written by practicing theater artists who have worked on the play An index by name literary work and concept rounds out this valuable resource

**Strategic Science in the Public Interest** G. Bruce Doern, Jeffrey S. Kinder, Jeff Kinder, 2007-01-01 The past twenty years have seen considerable shifts and struggles in government science that is in the way the state funds supports regulates conducts and uses scientific and technological activity Focusing on federal labs and agencies Strategic Science in the Public Interest explores how these labs have been located within and often buried by the larger commercially focussed federal innovation agenda G Bruce Doern and Jeffrey S Kinder examine four labs whose mandates deal with the Alberta oil sands environmental technologies wildlife research and mining and metals respectively The authors use these cases to explain why

a better middle level approach to analysis is needed for strategic public interest centred government science They illustrate the importance of understanding the variety as well as the similarity of federal science and technology labs and agencies and of instituting policies that reflect this diversity The growing importance of Related Science Activities RSA is also explored as well as the core trade offs between commercial and public goods science in their mandates and their internal capacities

Ladikas,2013-03-09 The Europäische Akademie zur Erforschung von Folgen wissenschaftlich technischer Entwicklungen Bad Neuenahr Ahrweiler GmbH european academy is concerned with the scientific study of the consequences of scientific and technological advance for the individual and social life and for the natural environment The main focus is to examine foreseeable mid and long term processes that are especially influenced by natural and engineering sciences and the medical

disciplines The academy fulfills this task by organizing interdisciplinary expert discussions Another important issue of the work of the Europäische Akademie concerns the methodology of Technology Assessment as a general issue This is the main reason that the European academy organized during the past two years a project funded by the European Commission on Technology Assessment Methods and Impact TAMI Together with partners from all over Europe a common understanding of what Technology Assessment TA is supposed to do was developed Most importantly it was acknowledged that the core of any TA activity has to be a sound scientific understanding of the relevant phenomena Communication then is of cardinal importance to reach the relevant decision makers as well as the general public It is true that this phase of the TA process has been treated with too little attention for many years The communication processes between scientific advisers and policy makers have hence to be further scrutinized
