Clinicians will gain a broader understanding of generative ataxias and the genetic disorders associated with them. In addition, new neurophysiological and imaging techniques are discussed along with an in-depth examination of the treatment and management protocols of ataxic diseases. A volume in the Handbook of Clinical Neurology series, which has an unparalleled reputation as the world's most comprehensive source of information in neurology. International list of contributors including the leading workers in the field. *Peripheral Nerve Disorders* José Berciano, Antonio García, Jon Infante, 2013-08-17 Hereditary ataxias HA encompass an increasing number of degenerative disorders characterized by progressive cerebellar ataxia usually accompanied by extracerebellar semeiology including peripheral nerve involvement Classically HA were classified according to their pathological hallmark comprising three main forms 1 spinal form predominantly with degeneration of spinocerebellar tracts posterior columns and pyramidal tracts Friedreich's ataxia FA 2 olivopontocerebellar atrophy OPCA and 3 cortical cerebellar atrophy CCA In the 1980s Harding proposed a clinico genetic classification based upon age of onset modality of transmission and clinical semeiology The main categories in this classification were as follows 1 early onset cerebellar ataxia EOCA with age of onset below 25 years and usually with autosomal recessive AR transmission this group encompasses FA and syndromes different from FA 2 autosomal dominant cerebellar ataxia ADCA with adult onset and with either cerebellar plus syndrome or pure cerebellar semeiology and 3 idiopathic late onset onset cerebellar ataxia ILOCA With the advent of molecular genetics the nosology of HA has been in a state of constant flux At present EOCA comprises at least 17 genotypes designated with the acronym of ARCA derived from AR cerebellar ataxia whereas under the umbrella of ADCA 30 genotypes have been reported In this chapter we will review peripheral nerve involvement in classical pathological entities OPCA and CCA ARCA ADCA and ILOCA paying special attention to the most prevalent syndromes in each category As a general rule nerve involvement is relatively common in any form of ataxia except ILOCA the most common pattern being either sensory or sensorimotor neuronopathy with a dying back process An exception to this rule is AR spastic ataxia of Charlevoix Saguenay where nerve conduction studies show the characteristic pattern of intermediate neuropathy implying that sarsin mutation

And instruments for diagnosing headaches Formal measurement of the effects of neurologic disease and of treatment effects beyond the description of changes on the standard neurologic examination is a relatively recent development Controlled clinical trials and outcomes research are at the heart of modern information based medicine and neurologic scales are essential tools in clinical trials designed to provide this information A Resource for Clinical Trials The Handbook of Neurologic Rating Scales provides a resource for clinicians and clinical investigators in the broad field of neurology and neurologic rehabilitation to help them evaluate the clinical trials literature by providing information on the scales being used evaluate and select appropriate and efficient scales for clinical trials and outcomes research and provide information that will help them to develop new scales or measures or to improve existing ones A Resource for Evaluating Disease Status Outcomes research is playing an increasingly important role in clinical management and neurorehabilitation and these also depend largely on measurement of disease status and change In this era of managed care neurologists must produce outcomes data demonstrating the effectiveness of neurologic care if the specialty is to survive and certainly if it is to thrive Even effective therapies are likely to fall by the wayside if studies to prove their effectiveness are not done Comprehensive and Standardized Information on All Scales Each chapter in this volume contains the scales of importance and in current use including a sequence of scale descriptions and specific scales in a standard format as well as a summary and recommendations indicating which scales are most useful for specific purposes and whether a combination of scales is particularly useful or if better scales are needed Each entry notes the purpose for which the scale was developed and its current uses if they differ from those for which it was developed a detailed description of the scale information about validation such as Does the scale have face validity i e does it appear to measure what it purports to measure how and by whom the scale is administered the time needed to administer and score the scale the scale itself or when the scale is proprietary or too long for inclusion a description and key references special considerations including unusual measures needed to obtain a valid score or problems in administering the test in specific patients advantages or what makes the scale good or useful Disadvantages or what makes the scale difficult to use or impairs its reliability key references including the original publication of the scale and its validation Downloadable PDFs of the scales contained in the Handbook of Neurologic Rating Scales are included with the purchase of this book The password to download the files can be found in the book itself
