McAlister, 2006-12-15 Annual cotton production exceeds 25 million metric tons and accounts for more than 40 percent of the textile fiber consumed worldwide A key textile fiber for over 5000 years this complex carbohydrate is also one of the leading crops to benefit from genetic engineering Cotton Fiber Chemistry and Technology offers a modern examination of co Handbook of Textile Fibre Structure Stephen Eichhorn, J. W. S. Hearle, M Jaffe, T Kikutani, 2009-10-19 Due to their complexity and diversity understanding the structure of textile fibres is of key importance This authoritative two volume collection provides a comprehensive review of the structure of an extensive range of textile fibres Volume 1 begins with an introductory set of chapters on fibre structure and methods to characterise fibres The second part of the book covers the structure of manufactured polymer fibres such as polyester polyamides polyolefin elastomeric and aramid fibres as well as high modulus high tenacity polymer fibres Chapters discuss fibre formation during processing and how this affects fibre structure and mechanical properties A companion volume reviews natural regenerated inorganic and specialist fibres Edited by leading authorities on the subject and with a team of international authors the two volumes of the

Handbook of textile fibre structure is an essential reference for textile technologists fibre scientists textile engineers and those in academia The first title of a authoritative two volume collection that provides a comprehensive review of the structure of a range of textile fibres Provides an overview of the development of fibre structure and methods to characterise fibres Examines the structure of both traditional and new fibres and natural and manufactured fibres Aspects of Textile Coloration Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO2 fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration Electrical Power Cable Engineering William A. Thue, 2017-12-19 Fully updated Electrical Power Cable Engineering Third Edition again concentrates on the remarkably complex design application and preparation methods required to terminate and splice cables This latest addition to the CRC Press Power Engineering series covers cutting edge methods for design manufacture installation operation and maintenance of reliable power cable systems It is based largely on feedback from experienced university lecturers who have taught courses on these very concepts The book emphasizes methods to optimize vital design and installation of power cables used in the interrelated fields of electrical mechanical and to some extent civil engineering An in depth exploration of power cable characteristics and applications it illustrates the many factors that can hinder real world cable performance Content focuses on low and medium voltages considering that these are used for the majority of cables in service globally This edition also details techniques for testing

shielded power cable systems in the field demonstrating how conductor material size and design depend on ampacity voltage regulation and other factors Covering everything from manufacturing to testing this resource will benefit Cable engineers and technicians working for investor owned utilities rural electric cooperatives and industrial manufacturers who need to improve their oversight and understanding of power cables Universities that offer electrical power courses Professionals who must master new power cable terminology engineering characteristics and background information that will aid them in their decision making responsibilities. The author is a life fellow of the IEEE and one of the original developers of industry standards for cables and accessories To simplify field fundamentals and techniques for less experienced readers his book contains new updated and expanded chapters and an extensive glossary in addition to useful references tables equations and photographs More experienced engineers will appreciate the book s invaluable updates on the emerging materials products and concepts driving their dynamic field Encyclopedic Dictionary of Named Processes in Chemical Technology, Fourth Edition Alan E. Comyns, 2014-02-21 Since the third edition of this reference was completed there have been major changes in the global chemical industry With less emphasis on new processes for making basic chemicals and more emphasis on pollution prevention and waste disposal petrochemical processes are giving way to biochemical processes. These changes are reflected in the new processes being developed many of which have their own names In addition niche improvements are still being made in petrochemistry and some of these processes have new names as well Gathering and defining a large portion of special named processes that may fall outside standard chemical texts or be scattered among industry manuals Encyclopedic Dictionary of Named Processes in Chemical Technology Fourth Edition provides a single source reference on an extensive array of named processes It provides concise descriptions of those processes in chemical technology that are known by special names that are not self explanatory. While overviews of the chemical technology industry are present in other books most of the names defined within this volume are unique to this compilation This reference includes named processes in current commercial use around the world processes that have been or are being piloted on a substantial scale and even obsolete processes that have been important in the past The length of the dictionary entries reflects their importance and topicality The text includes references that document the origins of the processes and review the latest developments Written by a highly experienced and respected author this user friendly text is presented in a practical dictionary format that is useful for a broad audience including industrial chemists and engineers **Advances in Polymer Coated Textiles** Gueneri Akovali,2012-07-24 Polymer coated textiles are known as engineered composite materials at macro scale Coating can offer significant improvements to the substrate mainly of the physical like impermeability and fabric abrasion and or of overall chemical properties as well as the appearance by combining advantages of the components Polymer coated systems employ various kinds of textile substrate structures available mostly of technical textiles Since there are a number of possibilities for different types of polymers and their combinations textile structures as well as their combinations are possible it is widely

open to creativities and almost every day some new innovative application is being introduced Polymer coated textile industry being parallel to the developments in the textile research is so dynamic that today applications like reactive coatings with nanoparticles with self cleaning self sterilizing surfaces systems with conductive polymer coatings to provide EM shielding electronic textile systems with body monitoring properties environmental responsive systems etc are already somewhat classical and are considered almost left in the shade of incoming new developments. This book is an up to date summary of the subject by considering the passage from conventional to emerging technologies Criteria for selection of the coat and textile are considered and the manufacturing basics of the system are summarized Emerging technologies and applications including smart intelligent and nanostructured applications are completed by testing and quality control methods of these systems. The book is written for all that are interested in this interdisciplinary area it certainly will prove to be of great help to textile and polymer technologists to engineers to scientists as well as to students Cotton S. Gordon, Y L Hsieh, 2006-12-22 Despite the increased variety of manufactured fibres available to the textile industry demand for cotton remains high because of its suitability on the basis of price quality and comfort across a wide range of textile products Cotton producing nations are also embracing sustainable production practices to meet growing consumer demand for sustainable resource production This important book provides a comprehensive analysis of the key scientific and technological advances that ensure the quality of cotton is maintained from the field to fabric The first part of the book discusses the fundamental chemical and physical structure of cotton and its various properties Advice is offered on measuring and ensuring the quality of cotton fibre Building on these basics Part two analyses various means for producing cotton such as genetic modification and organic production Chapters focus on spinning knitting and weaving technologies as well as techniques in dyeing The final section of the book concludes with chapters concerned with practical aspects within the industry such as health and safety issues and recycling methods for used cotton Written by an array of international experts within the field Cotton science and technology is an essential reference for all those concerned with the manufacture and quality control of cotton Summarises key scientific and technological issues in ensuring cotton quality Discusses the fundamental chemical and physical structure of cotton Individual chapters focus on spinning knitting and weaving technologies Fibres Brink, M. & Achigan-Dako, E.G., 2012 This volume deals with the fibres of Tropical Africa 515 primary use fibres are described in 248 review articles Many of the articles are illustrated with a geographic distribution map and a line drawing of the habit
