assessment tools for the built environment Furthermore the book serves as a guide in navigating the path towards achieving the greening agendas of the built environment and other sectors and seeks to align the new biomimicry assessment tool with the UN Sustainable Development Goals SDGs It is important reading for academics professionals and advanced students in the built environment engineering and sustainable development Green Building Costs Ming Hu,2023-08-08 Sustainability has become a driver of innovation in the built environment but the affordability of sustainable building remains a significant challenge This book takes a critical view of the real cost of green building It provides readers with a non biased evaluation based on empirical construction cost data and sheds light on the affordability of sustainable buildings Chapters are presented in three parts The first part lays the foundation to demystify the perception of green buildings being expensive to construct by providing empirical evidence that green buildings even net zero buildings are not necessarily more expensive to build than conventional buildings The second part presents empirical evidence common misperceptions of a higher green building construction cost are debunked The author offers a new framework to explain the construction cost drivers and differences of sustainable buildings the project characteristics and project team characteristics human factors The third part directs the readers attention to the important role that human factors play in controlling and reducing construction costs with a focus on the project design team A lack of skills expertise and experience during the design phase is likely to be the biggest contributor to higher construction costs Empirical analysis case studies on LEED certified buildings and interviews with project teams are used to present a pathway to more affordable green building at the end This will be a crucial resource for students and professionals in architecture engineering construction management and planning and energy policy *Green Building in Developing Countries* Zhonghua Gou,2019-07-30 The book reveals how green buildings are currently being adapted and applied in developing countries It includes the major developing countries such as China Indonesia Malaysia Thailand Pakistan Cambodia Ghana Nigeria and countries from the Middle East and gathers the insights of respected green building researchers from these areas to map out the developing world s green building revolution The book highlights these countries contribution to tackling climate change emphasising the green building benefits and the research behind them The contributing authors explore how the green building revolution has spread to developing countries and how national governments have initiated their own green building policies and agendas They also explore how the market has echoed the green building policy and how a business case for green buildings has been established In turn they show how an international set of green building standards in the form of various techniques and tools has been incorporated into local building and construction practices In closing they demonstrate how the developing world is emerging as a key player for addressing the energy and environmental problems currently facing the world The book helps developers designers and policy makers in governments and green building stakeholders to make better decisions on the basis of global and local conditions It is also of interest to engineers designers facility managers and researchers as it provides a holistic picture of

how the industry is responding to the worldwide call for greener and more sustainable buildings Developing A Body Of Knowledge For Green Construction Project Management Amos Darko, Albert P C Chan, 2024-09-10 Growing global imperatives to address sustainability concerns have boosted the importance and prominence of green construction projects worldwide. However, project managers may lack the specialist knowledge and/or technical skills to overcome the unique challenges to successfully deliver suitably sustainable green projects. This book aims to address this shortfall by unearthing, refining, and synergising the hitherto scattered gems of experiential and theoretical knowledge into a unified Body of Knowledge for green construction project management. Comprising both conceptual principles as well as practical case studies, this book for the first time assembles structures and consolidates a comprehensive body of knowledge for green construction project management that addresses the unique aspects of this critical domain. It will fulfil a now critical need equipping industry practitioners, researchers, and students with the core project management knowledge and skills needed to successfully deliver green construction projects. It is a must read for anyone who seeks to develop core green construction project management knowledge and skills and those intending to move into green construction project management.

Engineering Design and Mathematical Modelling Nnamdi Nwulu, Mammo Muchie, 2020-12-17 Engineering Design and Mathematical Modelling: Concepts and Applications consists of chapters that span the Engineering design and mathematical modelling domains. Engineering design and mathematical modelling are key tools/techniques in the Science, Technology, and Innovation spheres. Whilst engineering design is concerned with the creation of functional innovative products and processes, mathematical modelling seeks to utilize mathematical principles and concepts to describe and control real-world phenomena. Both of these can be useful tools for spurring and hastening progress in developing countries. They are also areas where Africa needs to skill up in order to build a technological base. The chapters in this book cover the relevant research trends in the fields of both engineering design and mathematical modelling. This book was originally published as a special issue of the African Journal of Science, Technology, Innovation, and Development. **Introduction to Sustainability for Engineers** Toolseeram Ramjeawon, 2020-02-13 Introduction to Sustainability for Engineers aims to incorporate sustainability into curricula for undergraduate engineering students.
