Resistivity

ACRi™ Array Compensated Resistivity Tool System

The ACRi™ array compensated resistivity tool system represents the latest thinking in conventional array induction technology. Every aspect of mechanical, electrical, software, and signal processing design has been optimized to yield array induction measurements with unparalleled accuracy, stability, and dynamic range.

The ACRi system is an asymmetric design that consists of a single transmitter operating at three frequencies and six receiver antennas with spacings from 6 to 80 in. A simple and robust skin effect method utilizes only the in-phase components of the received signals at all three frequencies. Each tool is individually characterized for thermal drift during manufacture. This characterization, in concert with sonde-mounted temperature sensors, provides the basis of a proprietary and highly accurate temperature compensation method. Real-time borehole corrections are usually derived from a caliper input and a sonde-mounted mud cell. When the caliper input is absent (e.g. downlogging), borehole corrections are derived from the short-spaced induction receiver data alone. The final step in the processing chain, 2D software focusing, produces five radial curves with matched vertical resolution and with radial focal depths of 10, 20, 30, 60, and 90 in. The ACRi sonde includes an integrated SP sensor.

Applications

- Accurate measures of formation resistivity at varying depths of investigation for enhanced estimates of R_o , R_{wa} , and Ih
- Quantitative assessment of S_{wa} , S_{hor} , and moveable water volumes
- Qualitative assessment of permeability and rock quality
- Array induction measurements are available in formations with resistivities from 0.2 to 2000 ohm-m and in water, air, or oil-filled boreholes
- Analysis of finely-bedded formations

Real-time 10-, 20-, 30-, 60-, 90-in. radial curves from the ACRi™ system are displayed in track 2. Good sensitivity to shallow invasion is in evidence in the near R_{10} and R_{20} , R_{30} , R_{60} , Ih and the graphical invasion map are available in real time.
