Lipid Analysis W. W. Christie,X Han,2010-01-10 This well known and highly successful book was first published in 1973 and has been completely re written in subsequent editions published in 1982 and 2003 This new Fourth Edition has become necessary because of the pace of developments in mass spectrometry of intact lipids which has given recognition of lipid analysis and lipidomics as a distinct science To bring the book up to date with these developments author William W Christie is joined by co author Xianlin Han Although devoting considerable space to mass spectrometry and lipidomics Lipid analysis remains a practical guide in one volume to the complexities of the analysis of lipids As in past editions it is designed to act as a primary source of value at the laboratory bench rather than residing on a library shelf Lipid analysis deals with the isolation separation identification and structural analysis of glycerolipids including triacylglycerols phospholipids sphingolipids and the various hydrolysis products of these The chapters follow a logical sequence from the extraction of lipids to the isolation and characterization of particular lipid classes and of molecular species of each and to the mass spectrometric analysis of lipids and lipidomics The new influence of mass spectrometry is due mainly to the development of electrospray ionization ESI and matrix assisted laser desorption ionization MALDI Most emphasis in this book is placed on ESI which is enabling structural characterization of different lipid classes and the identification of novel lipids and their molecular species
