Since the publication of the first edition, the biotechnology and biologics industries have gained extensive knowledge and experience in downstream processing using chromatography and other technologies associated with recovery and purification unit operations. This book will tie that experience together for the next generation of readers. Updates include sources and productivity types of products made today, experiences in clinical and licensed products, economics, current status of validation, illustrations, and tables, automated column packing, automated systems. New topics include the use of disposables, multiproduct versus dedicated production, design principles for chromatography media and filters, ultrafiltration principles and optimization, risk assessments, characterization studies, design space, platform technologies, process analytical technologies, PATs, biologics, comparability assessments. Key Features: new approaches to process optimization, use of platform technologies, applying risk assessment to process design. [Handbook of Biogenic Therapeutic Proteins](#) Sarfaraz Niazi, 2024-04-15 Since 1972, which marks the invention of recombinant engineering, more than 500 therapeutic proteins have been approved for clinical use. Today, biological drugs constitute almost 70% of all new drugs and have a biological origin. The first edition of this book dealt with biosimilars, and this edition, i.e., the second edition, focuses on new drugs, yet limits to therapeutic proteins. Newer technologies for drug development represent the updated topics in the book and include repositioning, AI-driven identification of newer designs, novel expression systems, manufacturing using these systems, rapidly changing regulatory pathways, and legal hurdles. This edition discusses how to identify, develop, manufacture, and take multibillion-dollar products to market within the shortest possible time. Features: Complete and thorough coverage of the regulatory and technological challenges of developing generic therapeutic proteins. Comprehensive discovery to market, newer technologies, regulatory planning, and IP hurdles are included that are not found elsewhere. Expanded volume that must be in the hands of every company interested in biological drugs, including the mRNA-based biopharmaceutical companies fast appearing on the market. Discusses how to identify, develop, manufacture, and take multibillion-dollar products to market in the shortest possible time. Renowned author and entrepreneur in the field of drug discovery and production.

**Method Validation in Pharmaceutical Analysis** Joachim Ermer, Phil W. Nethercote, 2014-08-27 This second edition of a global bestseller has been completely redesigned and extensively rewritten to take into account the new Quality by Design QbD and lifecycle concepts in pharmaceutical manufacturing. As in the first edition, the fundamental requirements for analytical method validation are covered, but the second edition describes how these are applied systematically throughout the entire analytical lifecycle. QbD principles require adoption of a systematic approach to development and validation that begins with predefined objectives. For analytical methods, these predefined objectives are established as an Analytical Target Profile (ATP). The book chapters are aligned with recently introduced standards and guidelines for manufacturing processes validation and follow the three stages of the analytical lifecycle: Method Design, Method Performance Qualification, and Continued Method Performance Verification. Case studies and examples from the pharmaceutical industry illustrate the concepts and guidelines presented, and the standards and regulations from the US FDA, European EMA, and global ICH regulatory authorities are considered throughout. The undisputed gold standard in the field.
