What You Need to Know about Lung Cancer, 1999 **Lung Cancer: Basic and Clinical Aspects** Heine H. Hansen, 2012-12-06 Lung cancer is one of the biggest challenges in oncology today The challenge is due to the recognition of the possibility of prevention in at least 70-80 % of all the cases and the extreme difficulties encountered in the treatment of this neoplasm Despite the knowledge of prevention measures such as cessation of cigarette smoking the incidence continues to increase in many countries The increase is particularly notable in females in the westernized countries where the death rate in females in certain regions surpasses that of breast cancer Furthermore in many developing countries lung cancer is now being diagnosed with increasing frequency in both sexes and it is expected to be a major cause of death in those countries later in this century or the beginning of next century if the tobacco consumption will continue its rapid rise With respect to therapy the 1970s brought considerable progress in understanding of the clinical behaviour of lung cancer thereby establishing the importance of distinguishing between the major histologic types Therapeutic advancement was particularly experienced in small cell carcinoma with the introduction of combination chemotherapy after this special disease entity among lung cancers was recognized as being a disseminated disease in almost all cases at the time of diagnosis It was expected that the improvement in therapy would have continued in the early 1980s not only for small cell lung cancer but also for the other cell types **Lung Cancer, Part I, An Issue of Clinics in Chest Medicine** M. Lung Cancer: David J. Stewart, 2010-03-10 Defining the Lung Cancer Problem 1 Lung cancer is the leading cause of cancer death in the world It kills almost as many Americans as cancers of the breast prostate colon rectum

pancreas and 2 kidney combined and accounts for 28.6% of all US cancer deaths. With an increase in the 5 year relative survival rate from 13% to only 16% in the more than 230 years from 1974 to the present it will take us another 840 years to eradicate lung cancer deaths if we do not improve the current rate of progress. As discussed in this text lung cancer prevention has received substantial attention. The decrease in smoking in recent decades has helped but smoking is not the only problem. Lung cancer in people who have never smoked is currently the 5th leading cause of cancer death in the United States. Several factors contribute to the lethality of lung cancer including the rapidity of tumor growth, advanced stage at diagnosis due to nonspecificity of early symptoms and the uncertain efficacy of screening, early development of metastases and resistance to therapy. Several chapters in this book discuss new molecular targets that may be potentially exploitable in the future as well as discussing our track record to date in exploiting them.

Principles and Practice of Lung Cancer

David P. Carbone, Harvey I. Pass, David H. Johnson, John D. Minna, 2010. Thoroughly revised and updated this Fourth Edition is the most comprehensive current reference on lung cancer with contributions from the world's foremost surgeons, radiation oncologists, medical oncologists, pulmonologists and basic scientists. Coverage includes complete information on combined modality treatments for small cell and non small cell lung cancer and on complications of treatment and management of metastases. Emphasis is also given to early detection, screening, prevention and new imaging techniques. This edition has expanded thoracic oncology chapters including thymus mesothelioma and mediastinal tumors, more detailed discussion of targeted agents and state of the art information on newer techniques in radiotherapy. Other highlights include more international contributors and greater discussion of changes in lung cancer management in each region of the world. A new editor, Giorgio Scagliotti MD from the University of Turin, has coordinated the accounts of European activities. A companion website includes the full text online and an image bank.

Lung Tumors Bruce J. Addis, 1988

This series on the treatment of cancer is sponsored by the UICC. The editors and authors feel strongly that more standardization in cancer therapy is needed on a worldwide basis. This of course is only possible if experts from all countries subscribe to a joint policy of making their treatment designs available to practising oncologists all over the world. Current Treatment of Cancer discusses all the equipment and methods now in use in cancer therapy. It covers all types of cancer thus providing the reader with comprehensive information on cancer management. In recent decades there has been a tremendous improvement in the treatment of cancer and there is hope for even further success in this fight. We are convinced that this series will help us to make a concerted response to the challenge of cancer. UICC Treatment and Rehabilitation Programme. Ismail Elsebai, Chairman. Preface. Part I. Members of two institutions, the Brompton Hospital in London and the Finsen Institute in Copenhagen, were invited to write on lung cancer and after reading the manuscripts it was decided that the contents of three pairs of chapters overlapped sufficiently for them to be combined.
