Green Chemistry An Introductory Text:

Green Chemistry Mike Lancaster, 2010 Aimed at students this introduction to green chemistry encourages new ways of thinking about how products and processes are developed

Green Chemistry Mike Lancaster, 2007-10-31 The challenge for today's new chemistry graduates is to meet society's demand for new products that have increased benefits but without detrimental effects on the environment *Green Chemistry An Introductory Text* outlines the basic concepts of the subject in simple language looking at the role of catalysts and solvents waste minimisation feedstocks green metrics and the design of safer more efficient processes The inclusion of industrially relevant examples throughout demonstrates the importance of green chemistry in many industry sectors Intended primarily for use by students and lecturers this book will also appeal to industrial chemists engineers managers or anyone wishing to know more about green chemistry

Green Chemistry Mike Lancaster, 2025-05-23 Climate change plastic in the oceans and air pollution are just three of the major environmental problems facing planet Earth It will take a global concerted effort to solve these from change in consumer culture and better global regulation to more sustainable product design and carbon neutral pollution free production processes Green chemistry does not have all the answers but with at least 98% of products having a chemical industry input along the supply chain adoption of the principles of green chemistry can make a huge difference This 4th edition still focuses on the core principles of green chemistry but has a new emphasis on how it can help solve many of the environmental problems facing society In particular there is a new chapter on energy decarbonisation and climate change bringing together sustainable energy solutions and possibilities for a fossil free chemical industry and showing how green chemistry can help other sectors such as transport and energy generation achieve net zero There is also discussion of the UN Sustainability Goals and how green chemistry is helping achieve these goals Green chemistry has moved on since the first edition of this book whilst still covering the basics this latest edition also looks at the practical solutions developed This timely textbook originally designed to cover a Masters course in Clean Technology and associated undergraduate modules at the University of York is suitable for undergraduates and post graduates as well as industrialists looking for new ways of thinking how more sustainable products and processes may be developed

Introduction to Green Chemistry Albert Matlack, 2010-04-05 The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Longer Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society Copiously illustrated with over 800 figures this second edition provides an update from the frontiers of the field

Introduction to Green Chemistry John Andraos, Albert S. Matlack, 2022-03-09 Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluorous biphasic catalysis metal organic frameworks and

process intensification which were barely mentioned in the First Edition have become major areas of research In addition government funding has ramped up the development of fuel cells and biofuels This reflects the evolving focus from pollution remediation to pollution prevention Copiously illustrated with more than 800 figures the Third Edition provides an update from the frontiers of the field It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry

NEW AND EXPANDED RESEARCH TOPICS Metal organic frameworks Metrics Solid acids for alkylation of isobutene by butanes Carbon molecular sieves Mixed micro and mesoporous solids Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on an atomic scale

UPDATED AND EXPANDED CURRENT EVENTS TOPICS Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Long Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society

Green Chemistry for Beginners Anju Srivastava, Rakesh K. Sharma, 2021-07-14 With escalating concerns over the current state of our planet the realization to work toward reducing our environmental footprint is gaining momentum Scientists have realized that green chemistry is the key to reduce waste rendering healthy environment and improving human health The 12 principles of green chemistry are the basic tenets that require understanding at the most fundamental level and implementation to promoting sustainable synthesis This book discusses innovations in the form of greener technologies superior green catalysts alternate reaction media and green energy sources and elaborates their tremendous potential in combating the critical global challenges on the horizon It intends to empower and educate students to grasp the key concepts of green chemistry think out of the box and come up with new ideas and apply the basic concepts in greening the world It extensively covers the goals of the United Nations 2030 Agenda of Sustainable Development which can be successfully achieved with the aid of green chemistry It also highlights cutting edge greener technologies such as biomimicry miniaturization and continuous flow Edited by two active green chemists the book presents in depth knowledge of this field and is extremely helpful for undergraduate graduate and postgraduate readers as well as academic and industrial researchers

Alternative Solvents for Green Chemistry Francesca Kerton, Ray Marriott, 2015-11-09 Everyone is becoming more environmentally conscious and therefore chemical processes are being developed with their environmental burden in mind This also means that more traditional chemical methods are being

replaced with new innovations and this includes new solvents Solvents are everywhere but how necessary are they They are used in most areas including synthetic chemistry analytical chemistry pharmaceutical production and processing the food and flavour industry and the materials and coatings sectors However the principles of green chemistry guide us to use less of them or to use safer more environmentally friendly solvents if they are essential Therefore we should always ask ourselves do we really need a solvent Green chemistry as a relatively new sub discipline is a rapidly growing field of research Alternative solvents including supercritical fluids and room temperature ionic liquids form a significant portion of research in green chemistry This is in part due to the hazards of many conventional solvents e g toxicity and flammability and the significant contribution that solvents make to the waste generated in many chemical processes Solvents are important in analytical chemistry product purification extraction and separation technologies and also in the modification of materials Therefore in order to make chemistry more sustainable in these fields a knowledge of alternative greener solvents is important This book which is part of a green chemistry series uses examples that tie in with the 12 principles of green chemistry e g atom efficient reactions in benign solvents and processing of renewable chemicals materials in green solvents Readers get an overview of the many different kinds of solvents written in such a way to make the book appropriate to newcomers to the field and prepare them for the green choices available The book also removes some of the mystique associated with alternative solvent choices and includes information on solvents in different fields of chemistry such as analytical and materials chemistry in addition to catalysis and synthesis The latest research developments not covered elsewhere are included such as switchable solvents and biosolvents Also some important areas that are often overlooked are described such as naturally sourced solvents including ethanol and ethyl lactate and liquid polymers including poly ethyleneglycol and poly dimethylsiloxane As well as these additional alternative solvents being included the book takes a more general approach to solvents not just focusing on the use of solvents in synthetic chemistry Applications of solvents in areas such as analysis are overviewed in addition to the more widely recognised uses of alternative solvents in organic synthesis Unfortunately as the book shows there is no universal green solvent and readers must ascertain their best options based on prior chemistry cost environmental benefits and other factors It is important to try and minimize the number of solvent changes in a chemical process and therefore the importance of solvents in product purification extraction and separation technologies are highlighted The book is aimed at newcomers to the field whether research students beginning investigations towards their thesis or industrial researchers curious to find out if an alternative solvent would be suitable in their work **Green**
