GREEN COMPUTING AND SUSTAINABILITY: THE ENERGY CHALLENGE Mr. Harish Reddy,Dr. Praveena. Murala,Dr. Ashish Avasthi,Mr. Subarno Bhattacharyya,2025-05-29 The term green computing which is often referred to as sustainable computing describes the process of designing using and disposing of computer systems in a manner that reduces the impact they have on the environment The energy consumption that is linked with computer infrastructure which includes data centres personal devices and networking equipment has become an urgent problem in our period which is characterised by the fast expansion of digital technology As a result of the worldwide dependency on information and communication

technologies ICT there is a large increase in the demand for energy which in turn contributes to the production of greenhouse gases and emphasizes the critical nature of tackling climate change Through the promotion of energy efficient hardware the optimisation of software to decrease resource utilisation and the encouragement of techniques such as virtualization cloud computing and responsible management of electronic waste green computing seeks to address this problem When it comes to energy one of the most significant difficulties is the operation of large scale data centres which require enormous quantities of electricity for both computation and cooling purposes The use of renewable energy sources the improvement of thermal management and the adoption of intelligent task allocation are all significant techniques for reducing the environmental impact In addition the examination of the lifetime of electronic equipment the extension of their usability and the development of models for circular economies are all components of sustainability in the field of computing When it comes to green computing the energy dilemma is not merely a technological issue rather it is a socio environmental imperative that calls for joint action from governments companies and consumers In the process of moving towards digital ecosystems that are more environmentally friendly green computing is at the forefront of innovation It is the engine that drives a balance between the growth of technology and the sustainability of the environment
