## **Green Plastics An Introduction To The New Science Of Biodegradable Plastics:**

**Green Plastics** E. S. Stevens, 2020-06-16 Plastics are everywhere Bags bank cards bottles and even boats can all be made of this celebrated but much maligned material Yet most of us know next to nothing about plastics We do know that they are practical and cheap but they also represent a huge environmental problem for they literally take ages to decompose In this engaging book E S Stevens tells us everything we have always wondered about plastics and of the efforts in America Europe and Asia to develop a new breed of environmentally friendly plastics He points to a possible future where plastics will no longer be made of petroleum but of plants The first two chapters assess the increased use of plastics as a relatively new alternative to other materials The third chapter introduces us to their impact on the environment and strategies for their disposal or recycling The next two chapters cover basic concepts and terms used in polymer sciences and provide some basic chemistry With these fundamentals in tow the author compares how petroleum based and biological polymers are made and the various ways in which they decompose He acquaints readers with the emerging technologies their commercial viability and their future Finally instructions are given for preparing basic bioplastics using readily available materials Nonspecialists will find *Green Plastics* a concise introduction to this exciting interdisciplinary topic an introduction otherwise not available For students it provides easy entry to an area of science with wide appeal and current importance for teachers excellent background reading for courses in various sciences The prospect of depleted fossil fuel supplies and the potential benefits of bioplastics to the environment and to rural areas that could supply the raw materials make this book a compelling

presentation of a subject whose time has come *Green Plastics* E. S. Stevens, 2002 Appendix includes formulas and procedures for making plastics **Handbook of Bioplastics and Biocomposites Engineering Applications** Srikanth Pilla, 2011-07-20 This Handbook is the first to explore the extensive applications made with bioplastics Civil Engineering Biomedical Automotive General Engineering The majority of the chapters review the properties processing characterization synthesis and applications of the bio based and biodegradable polymers and composites including Polymers such as polylactic acid PLA polyhydroxybutyrate PHB guar gum based plastics cellulose polyesters starch based bioplastics vegetable oil derived bioplastics biopolyethylene chitosan etc Thermoplastic and thermosetting bioplastics and biocomposites with a focus on the automobile industry The ways how to improve the properties of bioplastics polymer blends and biocomposites by combining them with both synthetic and natural fillers and reinforcements such as nanoclays nanotubes CNTs and natural fibers both wood and plant fibers Studies that expand the boundaries of bioplastics that will allow for the new materials to be applied to most generic engineering applications The Handbook will be of central interest to engineers scientists and researchers who are working in the fields of bioplastics biocomposites biomaterials for biomedical engineering biochemistry and materials science The book will also be of great importance to engineers in many industries including automotive biomedical construction and food packaging **Breakthrough: Corporate South Africa in a Green Economy** Nhamo,

*Environmental Policy Processes Surrounding South Africa's Plastic Bags Regulations: Tensions, Debates and Responses in Waste Product Regulation* Godwell Nhamo, 2008-01-31 This study was conducted in South Africa South Africa is the first country within the Southern African Development Community to have regulated plastic shopping bags waste through the imposition of both a standard on thickness and a levy Given this scenario the Plastic Bags Regulations present an illustrative case for researching complexity uncertainty and controversies surrounding a new trend in environmental policy making namely waste product regulation The thesis focuses on understanding and investigating tensions debates and responses emerging from the policy process as actors and actor networks put not only the Plastic Bags Regulations into circulation as focal actant token but also other actants and actant networks as well To this end a research question that addressed environmental policies tensions debates and responses that informed the development of South Africa's Plastic Bags Regulations was spelt out The research objectives included the need to 1 analyse selected international environmental policy processes surrounding plastic shopping bags litter and waste regulation and how these influenced developments in South Africa 2 identify actors actants and actor actant networks that shaped and were being transformed by South Africa's Plastic Bags Regulations and explain the tensions debates and responses arising in the policy processes 3 identify environmental policy outputs and assess outcomes emerging from the formulation and implementation of South Africa's Plastic Bags Regulations and 4 establish patterns in environmental policy process reforms around South Africa's Plastic Bags Regulations The language of actors human actants non human and actor actant networks brings to the fore the aspects of processes and relationships that exist around them As such insights from the actor actant network theory AANT were drawn upon to inform the research AANT enquiry framework collapses binaries such as nature society art science structure agency and global local historically associated with a particular type of social theory AANT also denies that purely technical scientific or social relations are possible the notion of quasi objects or token Data sets were generated following the Plastic Bags Regulations as token actant with time frames ranging from prior to

during and after the formulation of the regulations Similarly data analysis drew insights from AANT s four moments of translation namely problematisation interessement enrolment and mobilisation with the intervention theory providing an evaluative perspective that complemented AANT The findings were that after the promulgation of the first draft of the Plastic Bags Regulations in May 2000 tensions emerged around the nature of regulation whether command and control preferred by government or self regulation preferred by industry and labour In this regard the latter group raised concerns about jobs income and equipment loss as well as the need to have a holistic approach to waste management rather than targeting a single product at a time whilst the former maintained that this would not be so As such education awareness and stringent antilitter penalties were proposed by industry and labour as sustainable responses to the problem of plastic shopping bags waste rather than regulation These debates continued and resulted in minor amendments to the original regulations as finalised by Government in May 2002 However industry and labour continued lobbying government resulting in the conclusion of the Plastic Bags Agreement in September 2002 and the ultimate repulsion of the May 2002 regulations in May 2003 As revealed by this research these responses led to broader social responses and further tensions as demand for plastic shopping bags went down by about 80% although an estimated 1000 jobs were lost and a number of companies lost equipment and business with some closing down following the implementation of

electronics and discard five to seven million tons each year As a result electronic waste already makes up more than two thirds of the heavy metals and 40 percent of the lead found in our landfills But the problem goes far beyond American shores most tragically to the cities in China and India where shiploads of discarded electronics arrive daily There they are recycled picked apart by hand exposing thousands of workers and community residents to toxics As Grossman notes This is a story in which we all play a part whether we know it or not If you sit at a desk in an office talk to friends on your cell phone watch television listen to music on headphones are a child in Guangdong or a native of the Arctic you are part of this story The answers lie in changing how we design manufacture and dispose of high tech electronics Europe has led the way in regulating materials used in electronic devices and in e waste recycling But in the United States many have yet to recognize the persistent human health and environmental effects of the toxics in high tech devices If Silent Spring brought national attention to the dangers of DDT and other pesticides High Tech Trash could do the same for a new generation of technology s products

**Progress in Polymer Degradation and Stability Research** Herbert W. Moeller, 2007-06-11 Polymer degradation is a change in the properties tensile strength colour shape etc of a polymer or polymer based product under the influence of one or more environmental factors such as heat light or chemicals These changes may be undesirable such as changes during use or desirable as in biodegradation or deliberately lowering the molecular weight of a polymer Such changes occur primarily because of the effect of these factors on the chemical composition of the polymer In a finished product such a change is to be prevented or delayed However the degradation process can be useful from the view points of understanding the structure of a polymer or recycling reusing the polymer waste to prevent or reduce environmental pollution Polymers molecules are very large on the molecular scale which derive their unique and useful properties from their size

Natural Fibers, Biopolymers, and Biocomposites Amar K. Mohanty, Manjusri Misra, Lawrence T. Drzal, 2005-04-08 Natural Biofiber composites are emerging as a viable alternative to glass fiber composites particularly in automotive packaging building and consumer product industries and becoming one of the fastest growing additives for thermoplastics Natural Fibers Biopolymers and Biocomposites provides a clear understanding of the present state
