Splendid yarns Kirkus Reviews 41 Above the Rest Bud Webster, 2004-10-01 Groff Conklin was the most important science fiction anthologist through the years of the genre's true second generation that point at which its previously magazine bound masterpieces were being systematically located, aligned and placed into permanent format. His contribution over the period of two decades was irreplaceable and all of our postwar history exists in the penumbra of his work. Bud Webster has in this index granted an act of scholarship and homage of equal irreplaceability. Barry Malzberg, author and editor **Unstately Power** Lynn T. White, 1998 Reflections and Refractions Robert Silverberg, 2013-11-28 Nearly twenty years ago Robert Silverberg began writing a monthly column of opinion and commentary for Galileo Magazine, *Amazing Stories* and then for Isaac Asimov's *Science Fiction Magazine*. Now he has chosen the liveliest and most relevant of his hundreds of magazine columns for the present collection. They constitute a vivid chronicle of events both in science fiction and the world in general over the past two decades. Robert Silverberg is one of the great veterans of fantasy and science fiction. During the course of a career that has now stretched across more than forty years, he has written dozens of novels and hundreds of short stories, many of them considered classics of the genre. He has won more major award nominations than any other writer in his field and no less than nine Hugo and Nebula awards, the key sci-fi fantasy trophies. His books have been translated into some eighteen languages and his short stories have appeared in every science fiction and fantasy magazine in the world as well as in *Omni*, *Playboy* and *Penthouse*. **Visualizations of Urban Space** Christiane Wagner, 2022-12-30 This book explores environments where art, imagination and creative practice meet urban spaces at the point where they connect to the digital world. It investigates relationships between urban visualizations, aesthetics and politics in the context of new technologies and social and urban challenges toward the Sustainable Development Goals. Responding to questions stemming from critical theory, the book focuses on an interdisciplinary actualization of technological developments and social challenges. It demonstrates how art, architecture and design can transform culture, society and nature through artistic and cultural achievements, integration and new developments. The book begins with the theoretical framework of social aesthetics theories before discussing global contemporary visual culture and technological evolution. Across the 12 chapters, it looks at how architecture and design play significant roles in causing and solving complex environmental transformations in the digital turn. By fostering transdisciplinary encounters between architecture, design, visual arts and cinematography, this book presents different theoretical approaches to how the arts interplay with the environment, responds to the logic of the constructions of reality. This book will appeal to scholars, researchers and upper level students in aesthetics, philosophy, visual cultural studies, communication studies and media studies with a particular interest in sociopolitical and environmental discussions.
