It is a facultative anaerobe, meaning it can grow with or without oxygen. Staph. aureus is a major cause of skin infections, such as abscesses, boils, and impetigo. It can also cause more serious infections, such as pneumonia, osteomyelitis, and sepsis. Staph. aureus is resistant to many antibiotics, making it a difficult pathogen to treat.

Abstract: The purpose of this study was to determine the effect of a 12-week resistance training program on the strength and endurance of the lower extremities in healthy young adults. The subjects were 15 male and 15 female college students. The subjects were divided into two groups: a control group and an experimental group. The control group performed no resistance training, while the experimental group performed a 12-week resistance training program. The subjects were tested at baseline and at 12 weeks. The tests included a 10-minute step test, a 10-minute sit-to-stand test, and a 10-minute heel raise test. The results showed that the experimental group had significantly greater strength and endurance than the control group at 12 weeks. The results also showed that the experimental group had significantly greater strength and endurance than the control group at baseline. The results suggest that a 12-week resistance training program can improve the strength and endurance of the lower extremities in healthy young adults.
