aspirations and needs of the people they are designing for The chapters cover user needs and transport design and the transport system transport design case studies and the case for the automobile A conclusion briefly signals what the future for transport design might be Lavishly illustrated throughout in four colour Design for Transport is an imaginative and rigorous guide to how designers can take a user centred and socially responsible approach to tackling a range of types of transport from systems to products and from bicycles to automobiles demonstrating a rich array of solutions through case studies

Humans and Autonomous Vehicles Joseph Giacomin, 2022-11-30 This book provides an introduction to the Human Centred Design of autonomous vehicles for professionals and students While rapid progress is being made in the field of autonomous road vehicles the majority of actions and the research address the technical challenges with little attention to the physical perceptual cognitive and emotional needs of humans This book fills a gap in

the knowledge by providing an easily understandable introduction to the needs and desires of people in relation to autonomous vehicles. The book is human centred design led, adding an important human perspective to the primarily technology driven debates about autonomous vehicles. It combines knowledge from fields ranging from linguistics to electrical engineering to provide a holistic multidisciplinary overview of the issues affecting the interactions between autonomous vehicles and people. It emphasises the constraints and requirements that a human centred perspective necessitates, giving balanced information about the potential conflicts between technical and human factors. The book provides a helpful introduction to the field of design ethics to enhance the reader's awareness and understanding of the multiple ethical issues involved in autonomous vehicle design. Written as an accessible guide for design practitioners and students, this will be a key read for those interested in the psychological, sociological and ethical factors involved in automotive design, human centred design, industrial design and technology.
