Neuropsychotherapy Klaus Grawe, 2017-09-25 Neuropsychotherapy is intended to inspire further development and continual empirical updating of consistency theory. It is essential for psychotherapists, psychotherapy researchers, clinical psychologists, psychiatrists, neuroscientists, and mental health professionals. Profoundly important and innovative, this volume provides necessary know-how for professionals as it connects the findings of modern neuroscience to the insights of psychotherapy. Throughout the book, a new picture unfolds of the empirical grounds of effective psychotherapeutic work. Author Klaus Grawe articulates a comprehensive model of psychological functioning, consistency theory, and bridges the gap between the neurosciences and the understanding of psychological disorders and their treatment. Neuropsychotherapy illustrates that psychotherapy can be even more effective when it is grounded in a neuroscientific approach. Cutting across disciplines that are characteristically disparate, the book identifies the neural foundations of various disorders, suggests specific psychotherapeutic conclusions, and makes neuroscientific knowledge more accessible to psychotherapists. The book's discussion of consistency theory reveals the model is firmly connected to other psychological theoretical approaches from control theory to cognitive behavioral models to basic need theories. *Behavioral Expressions and Biosocial Bases of Sensation Seeking* Marvin Zuckerman, 1994-06-24 This book is about a trait describing variations in the universal need for novel and intense stimulation and its expressions in various risky kinds of behaviour, including driving habits, health gambling, financial risk, alcohol and drug use and abuse, sexual behaviour, and sports. Sensation seeking is also important in preferences for various vocations, media forms, and content, food, humour, and social attitudes. Compatibility in the trait influences premarital and marital relationship satisfaction. Its modes of assessment, behavioural expressions, and genetic and psychobiological bases are described by one of the leading researchers in this field. This book presents the only available study of this fascinating topic and it will be sure to interest researchers and their students active in personality research.
