False-memory Creation in Children and Adults David F. Bjorklund, 2000-05-01 As one of the most hotly debated topics of the past decade false memory has attracted the interest of researchers and practitioners in many of psychology's subdisciplines Real world issues surrounding the credibility of memories particularly memories of traumatic events such as sexual abuse reported by both children and adults have been at the center of this debate Were the adults actually retrieving repressed memories under the careful direction of psychotherapists or were the memories being created by repeated suggestion Were children telling investigators about events that actually happened or were the interviewing techniques used to get at unpleasant experiences serving to implant memories that eventually became their own There is evidence in the psychological research literature to support both sides and the potential impact on individuals families and society as a whole has been profound This book is an attempt to cut through the undergrowth and get at the truth of the recovered memory false memory creation puzzle The contributors review seminal work from their own research programs and provide theory and critical evaluation of existing research that is necessary to translate theory into practice The book will be of great value to basic and applied memory researchers clinical and social psychologists and other professionals working within the helping and legal professions

Stress, Trauma, and Children's Memory Development Mark L. Howe, Gail S. Goodman, Dante Cicchetti, 2008-04-10 Few questions in psychology have generated as much debate as those concerning the impact of childhood trauma on memory A lack of scientific research

to constrain theory has helped fuel arguments about whether childhood trauma leads to deficits that result in conditions such as false memory or lost memory and whether neurohormonal changes that are correlated with childhood trauma can be associated with changes in memory Scientists have also struggled with more theoretical concerns such as how to conceptualize and measure distress and other negative emotions in terms of for example discrete emotions physiological response and observer ratings To answer these questions Mark L Howe Gail Goodman and Dante Cicchetti have brought together the most current and innovative neurobiological cognitive clinical and legal research on stress and memory development This research examines the effects of early stressful and traumatic experiences on the development of memory in childhood and elucidates how early trauma is related to other measures of cognitive and clinical functioning in childhood It also goes beyond childhood to both explore the long term impact of stressful and traumatic experiences on the entire course of normal memory development and determine the longevity of trauma memories that are formed early in life Stress Trauma and Children s Memory Development will be a valuable resource for anyone interested in early experience childhood trauma and memory research
