Concepts of Creativity in Seventeenth-century England Rebecca Herissone, Alan Howard, 2013 The first genuinely interdisciplinary study of creativity

in early modern England In the seventeenth century the concept of creativity was far removed from most of the fundamental ideas about the creative act notions of human imagination inspiration originality and genius that developed in the eighteenth and nineteenth centuries Instead in this period students learned their crafts by copying and imitating past masters and did not consciously seek to break away from tradition Most new material was made on the instructions of a patron and had to conform to external expectations and basic tenets that we tend to take for granted such as the primacy and individuality of the author were apparently considered irrelevant in some contexts The aim of this interdisciplinary collection of essays is to explore what it meant to create buildings and works of art music and literature in seventeenth century England and to investigate the processes by which such creations came into existence Through a series of specific case studies the book highlights a wide range of ideas beliefs and approaches to creativity that existed in seventeenth century England and places them in the context of the prevailing intellectual social and cultural trends of the period In so doing it draws into focus the profound changes that were emerging in the understanding of human creativity in early modern society transformations that would eventually lead to the development of a more recognisably modern conception of the notion of creativity The contributors work in and across the fields of literary studies history musicology history of art and history of architecture and their work collectively explores many of the most fundamental questions about creativity posed by the early modern English creative arts
