Gulfstream G650 Maintenance Manual:

Integrated Vehicle Health Management Ian K Jennions, 2014-11-10 Integrated Vehicle Health Management Implementation and Lessons Learned is the fourth title in the IVHM series published by SAE International. This new book introduces a variety of case studies, lessons learned, and insights on what it really means to develop, implement, or manage an integrated system of systems. Integrated Vehicle Health Management Implementation and Lessons Learned brings to the reader a wide set of hands-on stories made possible by the contribution of twenty-three authors who agreed to share their experience and wisdom on how new technologies are developed and put to work. This effort was again coordinated by Dr Ian K Jennions, Director of the IVHM Centre at Cranfield University, UK, and editor of the previous books in the series. Integrated Vehicle Health Management Implementation and Lessons Learned, with seventeen fully illustrated chapters, covers diverse areas of expertise such as the impact of trust, human factors, and evidential integrity in system development. They are complemented by valuable insights on implementing APU health management, aircraft health trend monitoring, and the historical perspective of how rotorcraft HUMS (Health and Usage Monitoring Systems) opened doors for the adoption of this cutting-edge technology by the global commercial aviation industry. [Review of FAA's Certification Process](#) United States Congress, House, Committee on Transportation and Infrastructure, Subcommittee on Aviation, 2014. [Unsettled Topics on the Use of IVHM in the Active Control Loop](#) Rhonda Walthall, 2020-07-01. The growth in global economies has led to a world that has become much more mobile in the last few decades. The number of enplanements has increased and is expected to continue to do so at an annual average rate of 1.8% through 2039. Prior to the COVID-19 pandemic, the number of aircraft in service was expected to increase annually to meet the travel demand. Next-generation, more complex aircraft were scheduled to replace the older aircraft at a pace that still allowed sufficient capacity to meet the increasing demand. The events of 2020 have driven the industry to accelerate retirement of older aircraft while deferring the introduction of new aircraft. While the length of the industry recovery period cannot be predicted, most analysts believe that demand for travel will return once a vaccine is widely available. The impact to the design of next-generation aircraft will likely be shaped by technologies that are being accelerated for the post-COVID world, as well as for new mobility platforms. Technologies such as artificial intelligence and fault-tolerant and self-adapting control will use integrated vehicle health management (IVHM) capabilities as part of the decision-making processes. This SAE EDGE Research Report seeks to explore the unsettled issues surrounding embedding IVHM information into the active control loops of modern aircraft systems and in future generations of aircraft designs. NOTE: SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry. The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues. SAE EDGE Research Reports are not intended to resolve the challenges they identify or close any topic to further scrutiny. Click here to access the full SAE EDGETM
