Shakespeare's Language in Digital Media Janelle Jenstad, Mark Kaethler, Jennifer Roberts-Smith, 2017-12-22 The authors of this book ask how digital research tools are changing the ways in which practicing editors historicize Shakespeare's language. Scholars now encounter, interpret, and disseminate Shakespeare's language through an increasing variety of digital resources, including online editions such as the Internet Shakespeare Editions (ISE), searchable lexical corpora such as the Early English Books Online Text Creation Partnership (EEBO-TCP) or the Lexicons of Early Modern English (LEME) collections, high quality digital facsimiles such as the Folger Shakespeare Library's Digital Image Collection, text visualization tools such as Voyant apps for reading and editing on mobile devices, and more. What new insights do these tools offer about the ways Shakespeare's words made meaning in their own time? What kinds of historical or historicizing arguments can digital editions make about Shakespeare's language? A growing body of work in the digital humanities allows textual critics to explore new approaches to editing in digital environments and enables language historians to ask and answer new questions about Shakespeare's words. The authors in this unique book explicitly bring together the two fields of textual criticism and language history in an exploration of the ways in which new tools are expanding our understanding of Early Modern English.

Ng, Patricia C. Arocena, Denilson Barbosa, Giuseppe Carenini, Luiz Gomes, Stephan Jou, Anthony Leung, Evangelos Milios, Renée J. Miller, John Mylopoulos, Rachel A Pottinger, Frank Tompa, Eric Yu, 2022-05-31 In the 1980s traditional Business Intelligence BI systems focused on the delivery of reports that describe the state of business activities in the past such as for questions like How did our sales perform during the last quarter A decade later there was a shift to more interactive content that presented how the business

was performing at the present time answering questions like How are we doing right now Today the focus of BI users are looking into the future Given what I did before and how I am currently doing this quarter how will I do next quarter Furthermore fuelled by the demands of Big Data BI systems are going through a time of incredible change Predictive analytics high volume data unstructured data social data mobile consumable analytics and data visualization are all examples of demands and capabilities that have become critical within just the past few years and are growing at an unprecedented pace This book introduces research problems and solutions on various aspects central to next generation BI systems It begins with a chapter on an industry perspective on how BI has evolved and discusses how game changing trends have drastically reshaped the landscape of BI One of the game changers is the shift toward the consumerization of BI tools As a result for BI tools to be successfully used by business users rather than IT departments the tools need a business model rather than a data model One chapter of the book surveys four different types of business modeling However even with the existence of a business model for users to express queries the data that can meet the needs are still captured within a data model The next chapter on vivification addresses the problem of closing the gap which is often significant between the business and the data models Moreover Big Data forces BI systems to integrate and consolidate multiple and often wildly different data sources One chapter gives an overview of several integration architectures for dealing with the challenges that need to be overcome While the book so far focuses on the usual structured relational data the remaining chapters turn to unstructured data an ever increasing and important component of Big Data One chapter on information extraction describes methods for dealing with the extraction of relations from free text and the web Finally BI users need tools to visualize and interpret new and complex types of information in a way that is compelling intuitive but accurate The last chapter gives an overview of information visualization for decision support and text
