HAMMER TYPE

Multi-Impact Spring Hammer

See page 10

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (20-100 mesh). Based on the unique, spring-type hammer, feeding all these weight concentrations at the point of impact and reducing to light dust, without grinding, makes the hammer mill extremely economical. Low maintenance, prompt removal of broken plates in the hammer and free passage of the product from point of pulverizing is carried out on the material before it reaches the screening grids, thereby increasing wear on the hammers and grids.

Three different, specially built, unit hammer bearing assemblies are made in the sizes to reduce 1/2" to 2" material in the initial particle in size operation. High percentage of fine dust size are produced — discharge ports for quantities are set to suit requirements. Two sets of installed rubber grom bars if desired for accurate, increased screening surfaces are easily installed.

GYRATORY TYPES

Gyrax — Size 14"

Light Weight but Sturdy
High Efficiency
Low Feed Rates

The Gyrax Fine Reduction Crusher is a lightweight machine combining power strength with an unusually high efficiency.

The Traylor design of ball feed and spread screens fixed in these crushers eliminates feeding and grinding between crushing faces.

The construction is uncomplicated and easy to handle after bearings, and the screens, drive shaft and gears are all mounted in oil-air bath of circulating pump cooled for a large oil reservoir.

These crushers are suitable for feeding at extremely low settings, and by reason of their light weight, low feed rates and low power consumption are particularly adaptable for use with small portable crushing plants and specialized fine crushing applications in process industries.

Can be equipped with either bar or mesh driving pulley.

Traylor 'TY' and 'TZ'

Fine Reduction—Excellent Product
High Speed—Large Capacity
Low Overall Operating Costs

These crushers are manufactured under license to the Traylor Eng. & Mfg. Company of Jefferson, Mo., U.S.A. Type 'TY' and 'TZ' crushers are compact machines combining both fine screen and ball screen. They are designed to handle materials of varying hardness, grain efficiency and very economical in operation. The three 1/2" oil-air bath, circulating ball feed and spread screens at all-around bar feed discharge without discharge and a self-cleaning mechanism internally fixed with roller bearings.

The same capacity and efficiency of Traylor Gyrotype Crushers is due to the advanced design of the ball feed and spread screens.

Crushing is assisted by increasing the capacity of each screening feeding zone — power requirements are reduced, even at flow settings for producing a grade just below the screen, instead of a close crushing flow. The reduced clearance between material and crushing surfaces greatly increases the life of these parts. Ideal for secondary and tertiary crushing operations.

ROLL TYPE

Double Crushing Roll

See page 10

Crushing rolls will handle a wide range of materials, including those which cannot be crushed successfully by other machines.

The product from crushing rolls is generally intermediate in size between that of the reduction crusher and grinding mill.

The spacing capacity of rolls being broken, they should be formed of steel structure to gradually rise the larger material in the feed.

Crush rolls will take fine feeds of crushing rolls for combining stages of process industry. These include the ball or roller mill, plate mill, and roller mill. Roll stacks can be used in conjunction with, above and/or below the roller mill, or other coarse feed, composed or mixed, according to the service required.

Roller buffers or springs are fixed to provide the necessary crushing pressure and protect the movable roll in case of should undesirable substances enter the machine.

PLATE APRON TYPE

See page 10

These feeders are manufactured with frames in the Jaques Eng. & Mfg. Company of Jefferson, Mo., U.S.A. and are designed for heavy, portable construction with the impact of large lumps of material directed directly on to the feeder. They are most satisfactory when used with an impact crusher, a solid surface and power, or for an auxiliary, any Jaques material. The pans are fixed together with heavy pins and are supported by large steel rollers running in extra heavy duty, hardened bearings, mounted in rigid frame of heavy steel beam structure.
