SERVICE MANUAL

THE MAGNAVOX COMPANY • SERVICE DEPARTMENT
FORT WAYNE, INDIANA

MODELS W602, W603, W604, W605, W606, W607 & W608 AUTOMATIC RECORD PLAYERS

The Record Players shown above are representative of the types covered in this manual, i. e. Tall post, 11" turntable, Short post, 9 1/2" turntable.

GENERAL

All models of this series Magnavox Record Players are basically the same. Differences lie only in external appearance items and, in some cases, the type of drive motor.

Some versions in this series incorporate extended type control knobs while others use a short type knob assembly. The deluxe players covered in this manual utilize an 11" turntable disc.

The chart on Pages 16 & 17 shows the major differences in these various models. Other minor differences are identified in the exploded view diagrams and replacement parts lists.

All models are four-speed designed for operation at 16 2/3, 33 1/3, 45 and 78 RPM.

CHANGE CYCLE

The changer utilizes a "Velocity Trip" mechanism and the change cycle initiates by the fast inward motion of the pick-up arm when the stylus enters the lead-out groove at the end of the record.

As the tone arm tracks on the record, the Pick-up Positioning Finger "A" in Figure 3, which moves in unison with the tone arm, pushes against the Striker Feed Lever (111). The Striker Arm (121) is fed inward toward the turntable hub by the friction of its own weight resting on the curved end of the Striker Feed Lever (111).

As the record is playing, the Striker Arm (121) moves slowly toward the hub of the turntable, but the velocity of the Tone Arm is not sufficient to trip the mechanism; since the wiping action of the hub projection moves the Striker Arm (121) back with each revolution of the turntable.

However, when the stylus enters the lead-out groove at the end of the record, the velocity of the Striker Feed Lever (111) is sufficient to cause the Striker Arm (121) to move in ahead of the turntable hub projection.

The Striker Arm (121) is then "struck" by the hub projection and pushed far enough to cause the Drive Release Lever (131) to pivot and release the Locking Pin from the tab on the bottom of the Main Cam Gear Assembly (109). The assembly is then unlocked from the out-of-cycle or "Play" position, permitting the Drive Wheel (17) and its associated gear train to be pulled into contact with the motor pulley which drives the Main Cam Gear Assembly through the change cycle.

The Main Cam Gear Assembly makes one complete revolution in a clockwise direction during the change cycle.

As the Main Cam Gear (109) rotates, the Cam Gear Locating Roller "B" rides on various elevations on the Cam Gear (109), causing the Tone Arm Lift Lever (118) to pivot and raise the Pick-up Lift Spindle (103). This action raises the Tone Arm and determines its vertical travel.
