Item Generation for Test Development Sidney H. Irvine, Patrick C. Kyllonen, 2013-05-13 Since the mid 80s several laboratories around the world have been developing techniques for the operational use of tests derived from item generation. Aviation Mental Health Todd Hubbard, Robert Bor, 2016-04-15 This book provides an authoritative and practical guide to the assessment, management, treatment and care of pilots and other professional groups within aviation, covering a range of relevant topics for health and human resources practitioners working in the airline industry. Pilot mental health has hitherto been regarded as a specialist topic in aviation medicine. Consequently practitioners and researchers alike have been forced to consult specialist journals or seek out a relevant chapter on this topic in a general textbook to develop or update their understanding of the relevant issues. This book seeks to remedy this situation by gathering together all of the relevant insights into a single authoritative source gathered from the leading specialists in the field. It aims to cover all of the main relevant issues including the assessment, care, management and treatment of mental health problems as well as the prevention of mental health problems among this occupational group.

Computerised Test Generation for Cross-National Military Recruitment S.H. Irvine, 2014-03-03 *Computerised Test Generation for Cross National Military Recruitment* by Prof Sidney H Irvine is a handbook for use in occupational psychology test construction and psychometrics. The book describes the development of the British Army Recruitment Battery (BARB) by Prof Irvine and his colleagues at the University of Plymouth. BARB is a computer administered selection battery that is still in use to this day and is capable of developing new parallel tests for every candidate in the recruitment process. In telling the story, Sidney Irvine describes not

only the development of the battery itself funded by the UK Ministry of Defence but all the work that went on before and afterwards in the United Kingdom with European allies and in the United States _x000D_ Prof Irvine argues that judicious application of the current state of the art in psychometric selection tests can be used to maximise retention and minimise attrition As such this long awaited book will be of great interest to psychologists psychometricians test developers those involved in personnel selection and all with an interest in military history in particular the history of military science With a foreword and chapter introductions from a worldwide array of subject matter experts the book also has a full subject index and an extensive bibliography I commend it heartily Professor Jamie Hacker Hughes CPsychol CSci FBPsS Former Defence Consultant Advisor in Psychology Ministry of Defence United Kingdom **American Book Publishing Record** ,2002
