Temporal Dynamics and Ecological Process Colleen K. Kelly, Michael G. Bowler, Gordon A. Fox, 2014-01-16 In contrast with the fundamental ecological expectation that similarity induces competition and loss of species temporal dynamics allows similar species to co occur In fact the coexistence of similar species contributes significantly to species diversity and could affect ecosystem response to climate change However because temporal processes take place over time they have often been a challenge to document or even to identify Temporal Dynamics and Ecological Process brings together studies that have met this challenge and present two specific aspects of temporal processes reproductive scheduling and the stable coexistence of similar species By using plants to extract general principles these studies uncover deep ties between temporal niche dynamics and the above central ecological issues thereby providing a better understanding of what drives temporal processes in nature Written by leading scientists in the field this title will be a valuable source of reference to research ecologists and those interested in temporal ecology Processes of Vegetation Change C.J. Burrows, 2012-12-06 This book is about ideas on the nature and causes of temporal change in the species composition of vegetation In particular it examines the diverse processes of inter action of plants with their environment and with one another through which the species composition of vegetation becomes established The first chapter considers the general nature of vegetation and the ways in which vegetation change is perceived by ecologists Chapters 2 and 3 provide essential background about the relationships between plants and their abiotic and biotic environment Anyone who is familiar with the fundamentals of plant ecology may prefer to pass over Chapters 2 and 3 which of necessity cover their subject matter very briefly Sequences of development of vegetation on new volcanic rocks sand dunes and glacial deposits respectively are outlined in Chapters 4 5 and 6 Chapter 7 is about the patterns of vegetation change which occur in severe habitats around the world and Chapter 8 discusses wetlands Chapter 9 discusses the diverse responses of temperate forests to a variety of disturbing influences and Chapter 10 deals with change in the species rich forests of the Tropics Chapter 11 treats in detail the empirical and inferential data on the biological processes occurring during vegetation change sequences Chapter 12 considers the plant community phenomena which are implicated in the development of theory about vegetation change The final chapter Chapter 13 draws the diverse themes together into a unified theoretical structure by which the vegetation change phenomena may be understood

Encyclopedia of Plant and Crop Science (Print) Robert M. Goodman, 2004-02-27 Encyclopedia of Plant and Crop Science is the first ever single source reference work to inclusively cover classic and modern studies in plant biology in conjunction with research applications and innovations in crop science and agriculture From the fundamentals of plant growth and

reproduction to developments in agronomy and agricultural science the encyclopedia's authoritative content nurtures communication between these academically distinct yet intrinsically related fields offering a spread of clear descriptive and concise entries to optimally serve scientists agriculturalists policy makers students and the general public Processes, Mechanisms and Solutions in Coastal Wetland to Adapt to Changing Environment Qing Wang, Dongdong Shao, Yu Zhang, Qin Zhu, 2025-06-05 Coastal wetlands provide precious ecological services for us like coastal protection carbon storage flooding mitigation production and so on Mangrove saltmarsh sea grass oyster reef and coral reef are typical types of coastal wetland each type has its unique adaptive strategy to climate change through some processes and mechanisms Some of them are well known to us but most are unrecognized as they are far away from our living environment Furthermore in the context of climate change and anthropogenic influence the external disturbance is more complicated and changeable causing the responses of species and the related processes more secluded and unpredictable Therefore the multilevel processes or mechanisms in coastal wetland to adapt to climate change as well as the solutions is urgent and important to face the new challenges Coastal wetlands lie in the transition zone between lands and seas defending us from storms and floodings and providing important and valuable ecosystem services such as carbon stock and biodiversity maintenance However coastal wetlands are vulnerable and are one of the most physically disturbed ecosystems on earth because they are always in hydrodynamic conditions under the interactions among tides waves runoffs and so on Furthermore the combined impacts of climate change and human activities have caused more uncertainties and complexities on the environmental factors which imposed unparalleled impacts on the diversity distribution and ecological performance of coastal wetland ecosystem globally

Suding, 1999 The Coevolutionary Process John N. Thompson, 1994-11-15 Traditional ecological approaches to species evolution have frequently studied too few species relatively small areas and relatively short time spans In The Coevolutionary Process John N Thompson advances a new conceptual approach to the evolution of species interactions the geographic mosaic theory of coevolution Thompson demonstrates how an integrated study of life histories genetics and the geographic structure of populations yields a broader understanding of coevolution or the development of reciprocal adaptations and specializations in interdependent species Using examples of species interactions from an enormous range of taxa Thompson examines how and when extreme specialization evolves in interdependent species and how geographic differences in specialization adaptation and the outcomes of interactions shape coevolution Through the geographic mosaic theory Thompson bridges the gap between the study of specialization and coevolution in local communities and the study of broader patterns seen in comparisons of the phylogenies of interacting species Community Ecology Gary George Mittelbach, Brian J. McGill, 2019 Community ecology has undergone a transformation in recent years from a discipline largely focused on processes occurring within a local area to a discipline encompassing a much richer domain of study including the linkages

between communities separated in space metacommunity dynamics niche and neutral theory the interplay between ecology and evolution eco evolutionary dynamics and the influence of historical and regional processes in shaping patterns of biodiversity To fully understand these new developments however students continue to need a strong foundation in the study of species interactions and how these interactions are assembled into food webs and other ecological networks This new edition fulfils the book s original aims both as a much needed up to date and accessible introduction to modern community ecology and in identifying the important questions that are yet to be answered This research driven textbook introduces state of the art community ecology to a new generation of students adopting reasoned and balanced perspectives on as yet unresolved issues Community Ecology is suitable for advanced undergraduates graduate students and researchers seeking a broad up to date coverage of ecological concepts at the community level

Plant Invasions Anna Traveset, David M. Richardson, 2020-11-20 There are many books on aspects of plant invasions but none that focus on the key role of species interactions in mediating invasions This book reviews exciting new findings and explores how new methods and tools are shedding new light on crucial processes in plant invasions This book will be of interest to academics and students of ecology researchers engaged in developing management solutions scientific managers of natural ecosystems and policy makers

Microevolution Rate, Pattern, Process Andrew P. Hendry, Michael T. Kinnison, 2012-12-06 From guppies to Galapagos finches and from adaptive landscapes to haldanes this compilation of contributed works provides reviews perspectives theoretical models statistical developments and empirical demonstrations exploring the tempo and mode of microevolution on contemporary to geological time scales New developments and reviews of classic and novel empirical systems demonstrate the strength and diversity of evolutionary processes producing biodiversity within species Perspectives and theoretical insights expand these empirical observations to explore patterns and mechanisms of microevolution methods for its quantification and implications for the evolution of biodiversity on other scales This diverse assemblage of manuscripts is aimed at professionals graduate students and advanced undergraduates who desire a timely synthesis of current knowledge an illustration of exciting new directions and a springboard for future investigations in the study of microevolution in the wild

Approaches to Plant Evolutionary Ecology G.P. Cheplick, 2015-06-01 Plant evolutionary ecology is a rapidly growing discipline which emphasizes that populations adapt and evolve not in isolation but in relation to other species and abiotic environmental features such as climate Although it departs from traditional evolutionary and ecological fields of study the field is connected to branches of ecology genetics botany conservation and to a number of other fields of applied science primarily through shared concepts and techniques However most books regarding evolutionary ecology focus on animals creating a substantial need for scholarly literature with an emphasis on plants Approaches to Plant Evolutionary Ecology is the first book to specifically explore the evolutionary characteristics of plants filling the aforementioned gap in the literature on evolutionary ecology Renowned plant ecologist Gregory P Cheplick summarizes and synthesizes much of the primary

literature regarding evolutionary ecology providing a historical context for the study of plant populations from an evolutionary perspective The book also provides summaries of both traditional common gardens reciprocal transplants and modern molecular genetic approaches used to address questions about plant adaptation to a diverse group of abiotic and biotic factors Cheplick provides a rigorously written introduction to the rapidly growing field of plant evolutionary ecology that will appeal to undergraduate and graduate students with an interest in ecology and evolution as well as educators who are teaching courses on related topics *Plant Tissue Culture, Development, and Biotechnology* Robert N. Trigiano, Dennis J. Gray, 2016-03-30 Under the vast umbrella of Plant Sciences resides a plethora of highly specialized fields Botanists agronomists horticulturists geneticists and physiologists each employ a different approach to the study of plants and each for a different end goal Yet all will find themselves in the laboratory engaging in what can broadly be termed biotechnol

Essential Minerals in Plant-Soil Systems Azamal Husen, 2024-04-29 Essential Minerals in Plant Soil Systems Coordination Signaling and Interaction Under Adverse Conditions is the first book to encompass these key aspects of plant science biochemistry soil science and fertilizer development in a single volume Describing the micro and macronutrients in the plant soil system with the help of suitable illustrations the book connects all the pieces enabling comprehensive and connected understanding Terrestrial plants are sessile in nature They face various adverse environmental conditions including soil nutrient deficiency signals which influence overall plant growth and development Some of the essential nutrients are unreachable to roots due to their low solubility and relative immobilization Thus the soil plant system has evolved signaling communication and coordination responses for survival under multiple adverse situations By evolving highly sophisticated mechanisms at the cellular as well as whole plant scale these plants have developed ways to co regulate these stresses in order to maintain homeostasis Essential Minerals in Plant Soil Systems covers recent advances in the understanding of how plants coordinate the acquisition transport signaling and interaction cross talks between macro and micro nutrients in adverse environmental situations These points are key to understanding the significance of essential as well as beneficial elements for sustainable plant growth and production This book is a valuable reference for those putting research into practice in addressing stress situations as well as providing important foundational insights for further research Provides a comprehensive overview of micro and macronutrients and their interaction with phytohormones under stress conditions Explores proteomic and genomic research into deficiencies and toxicities in plant systems Highlights the use of nanobiotechnology for controlled release of micro and macronutrients in the plant soil systems *Soil Ecology and Ecosystem Services* Diana H. Wall, Richard D. Bardgett, 2013-07-18 This multi contributor international volume synthesizes contributions from the world s leading soil scientists and ecologists describing cutting edge research that provides a basis for the maintenance of soil health and sustainability The book covers these advances from a unique perspective of examining the ecosystem services produced by soil biota across different scales from biotic interactions at microscale to communities

functioning at regional and global scales The book leads the user towards an understanding of how the sustainability of soils biodiversity and ecosystem services can be maintained and how humans other animals and ecosystems are dependent on living soils and ecosystem services This is a valuable reference book for academic libraries and professional ecologists worldwide as a statement of progress in the broad field of soil ecology It will also be of interest to both upper level undergraduate and graduate students taking courses in soil ecology as well as academic researchers and professionals in the field requiring an authoritative balanced and up to date overview of this fast expanding topic

Plant Development and Biotechnology Robert N. Trigiano, Dennis J. Gray, 2004-07-28 Biotechnology revolutionized traditional plant breeding programs This rapid change produced new discussions on techniques and opportunities for commerce as well as a fear of the unknown Plant Development and Biotechnology addresses the major issues of the field with chapters on broad topics written by specialists The book applies an informal s
