Hog Manure Management, the Environment and Human Health Tiffany T.Y. Guan, Richard A. Holley, 2011-06-28 This volume provides a current look at how development of intensive live stock production particularly hogs has affected human health with respect to zoonotic diseases primarily transmitted by food but also by water air and occupational activity While information presented focuses on the development of increasing livestock production in Canada examples are given and comparisons are made with other countries Denmark Taiwan the Netherlands and the United States where the levels of livestock production are much more intense and where the industry is more mature Canada is also searching for solutions to enable handling the growing volume of its livestock waste properly Lessons learned from the experience of those who have gone before are invaluable and are drawn together in this volume to serve as useful guidance for others in plotting the courses of action possible to avoid serious environmental setbacks and negative human health effects through foodborne illness A significant portion of the text is devoted to a discussion of enteric illness in humans caused by zoonotic pathogens The second chapter deals with survival of pathogens which cause foodborne illness in manure environments An evaluation of the human health hazard likely to occur from the use of manure as fertilizer is important because of the recent trend toward an increase in foodborne illness from the consumption of minimally processed fruits and vegetables that may have been fertilized with animal derived organic materials

Global Environmental Change: The Threat to Human Health Samuel S. Myers, 2009-11 Over the past two to three hundred years humanity's ecological footprint has ballooned to such an extent that we are now fundamentally altering the planet We have transformed the Earth's land surface and altered the function of its ecosystems and we are triggering the rapid loss of both terrestrial and marine life We are also profoundly changing our planet's climate It is increasingly apparent that the breadth and depth of the changes we are wreaking on the environment are imperiling not only many of the other species with which we share the ecological stage but the health and wellbeing of our own species as well Global climate change threatens human health in numerous and profound ways Large segments of the population will experience more heat

waves altered exposure to infectious disease and more frequent natural disasters Most significantly climatic disruption threatens the adequacy of the core building blocks of health for large populations around the globe sufficient food and nutrition safe water for drinking and sanitation fresh air to breathe and secure homes to live in As climate change dismantles these central elements of healthy societies people with fewer resources will be forced to migrate in large numbers to lands where they may not be welcome A likely result of all of these processes will be increased civic instability and strife

Assessment of Chemical Exposures Jack E. Daugherty, 1997-10-23 Traditionally industrial hygienists and environmental engineers have been responsible for conducting chemical exposure assessments however this task is now becoming a team effort taken on by scientists businessmen and policymakers Assessment of Chemical Exposures Calculation Methods for Environmental Professionals addresses the expanding scope of exposure assessments in both the workplace and environment It discusses the basics of gathering data and assessing exposure including how to estimate exposure to chemicals using fundamental chemical engineering concepts

The book opens with a brief discussion on the history of exposure assessments and provides terms and nomenclature needed for communications between various disciplines involved in exposure assessments. The potential impact of chemical exposures on humans, the environment, and communities is discussed in detail. The book also addresses modeling, source generation, pathway, transport, and receptor impact. With the clear explanations presented in this text, even a novice will be able to practice the art of exposure assessment.

Green Infrastructure John W. Dover, 2015-07-16. With more than half of the world's population now living in urban areas, it is vitally important that towns and cities are healthy places to live. The principal aim of this book is to synthesize the disparate literature on the use of vegetation in the built environment and its multifunctional benefits to humans. The author reviews issues such as contact with wildlife and its immediate and long-term effects on psychological and physical wellbeing; the role of vegetation in removing health-damaging pollutants from the air; green roofs and green walls which provide insulation, reduce energy use, and decrease the carbon footprint of buildings; and structural vegetation such as street trees providing shading and air circulation whilst also helping to stop flash floods through surface drainage. Examples are used throughout to illustrate the practical use of vegetation to improve the urban environment and deliver ecosystem services. Whilst the underlying theme is the value of biodiversity, the emphasis is less on existing high-value green spaces such as nature reserves, parks, and gardens than on the sealed surfaces of urban areas: building surfaces, roads, car parks, plazas, etc. The book shows how these and the spaces they encapsulate can be modified to meet current and future environmental challenges, including climate change. The value of existing green space is also covered to provide a comprehensive textbook of international relevance.
