Understanding Monumentality Across Ancient Civilizations Federico Buccellati, Sebastian Hageneuer, Sylva van der
Heyden, Felix Levenson, 2019-07-30 When talking about monuments size undeniably matters or does it But how else can we
measure monumentality Bringing together researchers from various fields such as archaeology museology history sociology
Mesoamerican studies and art history this book discusses terminological and methodological approaches in both theoretical
contributions and various case studies While focusing on architectural aspects this volume also discusses the social meaning
of monuments the role of forced and free labour as well as textual monumentality The result is a modern interdisciplinary

observes a remarkable spatial correspondence of zones of active tectonism i e plate boundaries in the earth s crust with the
most complex cultures of antiquity great ancient civilizations and continues to explore the meaning of this relationship from a
number of independent angles Due to resulting site damage this distribution is counter intuitive Nevertheless systematic
differences between tectonic and quiescent cultures show that tectonic activity corresponded in antiquity with more cultural
dynamism Data of several independent types support direct cultural influence of tectonism including vignettes of the impact
of tectonism in specific ancient cultures An expectation of change seems to be a feature such tectonic cultures shared and led
to an acceleration of development These dynamics continue though much obscured in the present day *Catalog of*
