Resources in Education , 1999 Zoological Record , 1990 *Organizing for Policy Influence* Benjamin Farrer, 2017-08-09 In this book Benjamin Farrer explains how activists can influence the policies they care about even when they are outnumbered and their issues are ignored The solution lies in a surprising place organizational choice Different types of organizations will be more influential under particular democratic institutions If they choose the optimal type of organization given their institutional context then even minority groups can be influential Environmentalists are a key example of how small groups can sometimes punch above their weight Environmentalists in different countries have made different organizational choices These choices explain whether or not they succeeded in influencing policy In the empirical chapters that follow Farrer shows that environmentalists can sometimes be more influential if they form interest groups but under other institutions political parties are the optimal organizational choice Although interest groups are often easier to create national institutions can sometimes insulate mainstream politicians from niche interest groups When institutions deny access to interest groups activists are forced to send the stronger signal of party entry Using a variety of methods including a formal model an experiment and a wealth of empirical data from a variety of settings Farrer proves that this theory of organizational choice adds to our understanding of several crucial phenomena First it helps explain patterns of political participation by showing the importance of instrumental rather than purely expressive motivations for activism Second it

provides an important modification to Duverger's 1954 law by showing that new party entry is a function not only of electoral rules but also of the rules that govern interest groups Third it extends research on the role of institutions in determining policy outputs by showing that policy outcomes are a function of the interaction between organizational choices and institutional context

System Innovation for Sustainability 1 Arnold Tukker, Martin Charter, Carlo Vezzoli, Eivind Stø, Maj Munch Andersen, 2017-09-08 Sustainable consumption and production SCP was adopted as a priority area during the World Summit on Sustainable Development in Johannesburg in 2002 and has since become one of the main vehicles for targeting international sustainability policy Sustainable consumption focuses on formulating equitable strategies that foster the highest quality of life the efficient use of natural resources and the effective satisfaction of human needs while simultaneously promoting equitable social development economic competitiveness and technological innovation But this is a complex topic and as the challenges of sustainability grow larger there is a need to re-imagine how SCP policies can be formulated governed and implemented The EU funded project Sustainable Consumption Research Exchanges SCORE consists of around 200 experts in the field of sustainable innovation and sustainable consumption The SCORE philosophy is that innovation in SCP policy can be achieved only if experts that understand business development sustainable solution design consumer behaviour and system innovation policy work together in shaping it Sustainable technology design can be effective only if business can profitably make the products and consumers are attracted to them To understand how this might effectively happen the expertise of systems thinkers must be added to the mix System Innovation for Sustainability 1 is the first result of a unique positive confrontation between experts from all four communities It examines what SCP is and what it could be provides a state of the art review on the governance of change in SCP policy and looks at the strengths and weaknesses of current approaches The SCORE experts are working with actors in industry consumer groups and eco labelling organisations in the key consumption areas of mobility food and agriculture and energy use and housing responsible for 70% of the life cycle environmental impacts of Western societies with the aim of stimulating fostering or forcing change to SCP theory in practice The System Innovation for Sustainability series will continue with three further volumes of comprehensive case studies in each of these three critical consumption areas Each chapter of this book examines problems and suggests solutions from a business design consumer and system innovation perspective It primarily examines the differing solutions necessary in the consumer economies of the West but also comments on the differing needs in rapidly emerging economies such as China as well as base of the pyramid economies The System Innovation for Sustainability series is the fruit of the only major international research network on SCP and will set the standard in this field for some years to come It will be required reading for all involved in the policy debate on sustainable production and consumption from government business academia and NGOs for designers scientists businesses and system innovators

Key Topics in Landscape Ecology Jianguo Wu, Richard J. Hobbs, 2007-03-29 Landscape ecology is a relatively new area of study which aims to understand the pattern of interaction of biological and cultural communities within a landscape This book brings together leading figures from the field to provide an up to date survey of recent advances identify key research problems and suggest a future direction for development and expansion of knowledge Providing in depth reviews of the principles and methods for understanding landscape patterns and changes the book illustrates concepts with examples of innovative applications from different parts of the world Forming a current state of the science for the science of landscape ecology this book forms an essential reference for graduate students academics professionals and practitioners in ecology environmental science natural resource management and landscape planning and design Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as

it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics **The Zoological Record** ,1995

Gliessman,2007 Providing the theoretical and conceptual framework for this continually evolving field Agroecology The Ecology of Sustainable Food Systems Second Edition explores environmental factors and complexities affecting agricultural crops and animals Completely revised updated and reworked the second edition contains new data new readings new issues and case studies and new options It includes two completely new chapters one on the role of livestock animals in agroecosystems and one on the cultural and community aspects of sustainable food systems The author clearly delineates the importance of using an ecosystem framework for determining if a particular agricultural practice input or management decision contributes or detracts from sustainability He explains how the framework provides the ecological basis for the functioning of the chosen management strategy over the

long term He also examines system level interactions stressing the need for understanding the emergent qualities of populations communities and ecosystems and their roles in sustainable agriculture Using examples of farming systems in a broad array of ecological conditions the book demonstrates how to use an ecosystem approach to design and manage agroecosystems for sustainability *Understanding the behaviour and improving the welfare of pigs* Prof. Sandra Edwards,2021-01-29 Emphasises advances in understanding pig behaviour as the foundation for understanding and improving welfare Comprehensive coverable of welfare issues across the value chain covering breeding and gestation farrowing and lactation weaning growing and finishing as well as transport lairage and slaughter Particular focus on ways of assessing and reducing pain in such areas as tail docking and castration Management in the Age of Digital Business Complexity Bill McKelvey, Renata Kaminska, Maria Paz Salmador, Nadine Escoffier, 2021-09-07 Management in the Age of Digital Business Complexity focuses on how the digital age is changing management and vastly speeding up complexity dynamics The recent coevolution of technologies has dramatically changed in just a few years how people and firms learn communicate and behave Consequently the process of how firms coevolve and the speed at which they coevolve has been dramatically changed in the digital age and managerial methods are lagging way behind Combining his own expertise with that of a number of specialist and international co authors McKelvey conveys how companies that fall behind digitally can quickly be driven out of business The book has been created for academics seeking to upgrade management thinking into the modern digital age and vastly improve the change capabilities of firms facing digital oriented competition *Reader's Guide to the Social Sciences* Jonathan Michie, 2014-02-03 This 2 volume work includes approximately 1 200 entries in A Z order critically reviewing the literature on specific topics from abortion to world systems theory In addition nine major entries cover each of the major disciplines political economy management and business human geography politics sociology law psychology organizational behavior and the history and development of the social sciences in a broader sense *Valuing Nature* Robert Fish, Holly McKelvey, 2021-11-16 When a group of liberal arts students embark on a university assignment about the natural environment no one could have quite prepared them for the bewildering array of questions and provocations to confront them in their task What starts out as an earnest attempt to understand nature in the modern world turns into a philosophical and practical tangle that only a good transdisciplinary education can provide Can anyone save the day and actually start to value nature And if they can't then what's stopping them The idea of valuing nature harmonises diverse areas of natural resource management and is an important dimension of scientific and practical work concerned with managing ecosystems and habitats for sustainability This graphic book takes the reader on an exploration of the issues that arise from this growing interest and concern in the valuation of nature Set around the premise of a motley group of undergraduates endeavouring to complete a university assignment on nature in the modern world the book explores the many and diverse meanings people assign to nature the different ways the relationship between people and nature might be

characterised the many values systems people hold for the natural world the options and approaches society can deploy to manage it the extent to which we need entirely new economic systems to protect and sustain nature This highly interdisciplinary book invites consideration of a range of philosophical and applied debates and questions Written in an accessible style it is an ideal undergraduate text in the fields of ecology human and physical geography conservation science environment social science and spatial planning as well as a general primer for graduate natural and social scientists embarking on interdisciplinary research in the natural resource management arena *The Palgrave Encyclopedia of Urban and Regional Futures* Robert C. Brears, 2023-01-13 While urban settlements are the drivers of the global economy and centres of learning culture and innovation and nations rely on competitive dynamic regions for their economic social and environmental objectives urban centres and regions face a myriad of challenges that impact the ways in which people live and work create wealth and interact and connect with places Rapid urbanisation is resulting in urban sprawl rising emissions urban poverty and high unemployment rates housing affordability issues lack of urban investment low urban financial and governance capacities rising inequality and urban crimes environmental degradation increasing vulnerability to natural disasters and so forth At the regional level low employment low wage growth scarce financial resources climate change waste and pollution and rising urban peri urban competition etc are impacting the ability of regions to meet socio economic development goals while protecting biodiversity The response to these challenges has typically been the application of inadequate or piecemeal solutions often as a result of fragmented decision making and competing priorities with numerous economic environmental and social consequences In response there is a growing movement towards viewing cities and regions as complex and sociotechnical in nature with people and communities interacting with one another and with objects such as roads buildings transport links etc within a range of urban and regional settings or contexts This comprehensive MRW will provide readers with expert interdisciplinary knowledge on how urban centres and regions in locations of varying climates lifestyles income levels and stages development are creating synergies and reducing trade offs in the development of resilient resource efficient environmentally friendly liveable socially equitable integrated and technology enabled centres and regions Juvenile Delinquency William E.
