Grell, Kazuo Fujiwara, Franco Pedrotti, 2018-04-18 This book presents studies on current vegetation topics from polar to tropical regions. It is a festschrift to mark the 70th birthday of Prof. Elgene O. Box, who has studied vegetation all over the world both through fieldwork and modeling. It reflects a number of his interests including basic ecological plant forms of plant functional types, temperate zone forests and evergreen versus seasonal patterns. Section 1 discusses the concept of vegetation series, while Section 2 has two global scale chapters on plant functional traits and whether they are related more to climate or phylogeny. Section 3 has nine chapters focusing on vegetation history, regional vegetation, and how these have influenced current species organizations and distributions. Regions treated include Russia, China, the USA, Mexico, and Mediterranean areas. Lastly, Section 4 addresses aspects of vegetation change and plant ecology. Every chapter in this unique book offers original ideas on the topic of vegetation as the authors are assembled from a world-wide population of leading vegetational ecologists whose interests range from local communities to global theoretical questions. Henry Holt & Company, 1994 *Land Bridges* Alan Graham, 2018-03-30 Land bridges are the causeways of biodiversity. When they form, organisms are introduced into a new patchwork of species and habitats, forever altering the ecosystems into which they flow, and when land bridges disappear or fracture, organisms are separated into reproductively isolated populations that can evolve independently. More than this, land bridges play a role in determining global climates through changes to moisture and heat transport and are also essential factors in the development of biogeographic patterns across geographically remote regions. In this book, paleobotanist Alan Graham traces the formation and disruption of key New World land bridges and describes the biotic, climatic, and biogeographic ramifications of these land masses changing formations over time. Looking at five land bridges, he explores their present geographic setting and climate, modern vegetation, indigenous peoples, with special attention to their impact on past and present vegetation and geologic history. From the great Panamanian isthmus to the boreal connections across the North Atlantic and North Pacific Oceans that allowed exchange of organisms between North America, Europe, and Asia, Graham's sweeping one hundred million year history offers new insight into the forces that shaped the life and land of the New World. **Modern Biology** Towle, Albert Towle, 1991 Plant Science Bulletin, 1962 **The Challenges of Modernity for Reindeer Management**, 2004 The Challenges of Modernity For Reindeer Management.
