Judging Science Judging Science:

Judging Science Kenneth R. Foster,1997 **Judging Science** Kenneth R. Foster,Peter W. Huber,1999 Attempting to reconcile the law's need for workable rules of evidence with the views of scientific validity and reliability What is scientific knowledge and when is it reliable These deceptively simple questions have been the source of endless controversy In 1993 the Supreme Court handed down a landmark ruling on the use of scientific evidence in federal courts Federal judges may admit expert scientific evidence only if it merits the label scientific knowledge The testimony must be scientifically reliable and valid This book is organized around the criteria set out in the 1993 ruling Following a general overview the authors look at issues of fit whether a plausible theory relates specific facts to the larger factual issues in contention philosophical concepts such as the falsifiability of scientific claims scientific error reliability in science particularly in fields such as epidemiology and toxicology the meaning of scientific validity peer review and the problem of boundary setting and the risks of confusion and prejudice when presenting science to a jury The book's conclusion attempts to reconcile the law's need for workable rules of evidence with the views of scientific validity and reliability that emerge from science and other disciplines

The Disunity of Science Peter Louis Galison,David J. Stump,1996 Is science unified or disunified

Over the last century the question has raised the interest and hackles of scientists philosophers historians and sociologists of science for at stake is how science and society fit together Recent years have seen a turn largely against the rhetoric of unity ranging from the praise of condensed matter physicists for disciplinary autonomy all the way to discussions in the humanities and social sciences that involve local history feminism multiculturalism postmodernism scientific relativism and realism and social constructivism Many of these varied aspects of the debate over the disunity of science are reflected in this volume which brings together a number of scholars studying science who otherwise have had little to say to each other feminist theorists philosophers of science sociologists of science How does the context of discovery shape knowledge What are the philosophical consequences of a disunified science Does for example an antirealism a realism or an arealism become defensible within a picture of local scientific knowledge What politics lies behind and follows from a picture of the world of science more like a quilt than a pyramid Who gains and loses if representation of science has standards that vary from place to place field to field and practitioner to practitioner
