

## The Retrograde Motion of Mars

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Retrograde is from Earth's perspective with Earth having a faster orbit than Mars so it overtakes Mars in the perspective as it looks like it's going backward in the sky. The planets don't actually move backwards in the sky.

4) Explain why we see Mars and not some of the Jovian planets for the retrograde.

The Jovian planets are much farther away and their orbits take longer, so the retrogrades would be harder to readily see.
