Stromberg, 1986 **Nature's Witness** Dr. Daniel M. Harrell, 2010-09-01 People of faith insist that God is the God of the world around us Yet scientific evidence supporting evolution seems to offer an explanation of reality different from the biblical one In light of this apparent conflict some choose either to deny the scientific data or separate science and faith from each other giving the appearance that faith is disconnected from reality Others accommodate faith to science but run the risk of watering down faith such that faith fills in the blanks left by science Against these options Daniel Harrell asserts that the evidence for evolution accurately describes the world we see but insists that this description does not adequately serve as an explanation for the world Rather than seeing science and faith as diametrically opposed Harrell suggests that evolutionary data actually opens the door for deeper theological reflection on God's creation Writing out of a pastoral concern for those struggling to negotiate faith and evolution Harrell argues that being reliable witnesses to creation helps people of faith be reliable witnesses to its creator Whether they are pastors wondering how to talk about these issues with their congregations or students asking whether their biology classes make their faith irrelevant Harrell's readers are winsomely led on a journey of exploration in which a robust biblical faith can be held along with affirmation of the scientific data for evolution *Science and Religion in Dialogue* Melville Y. **Anatomy Live** Maaik Bleeker, 2008 Gross anatomy the study of anatomical structures that can be seen by unassisted vision has long been a subject of fascination for artists For most modern viewers however the anatomy lesson the technically precise province of clinical surgeons and medical faculties hardly seems the proper breeding ground for the hybrid workings of art and theory We forget that in its early stages anatomy pursued the highly theatrical spirit of Renaissance science as painters such as Rembrandt and Da Vinci and medical instructors like Fabricius of Aquapendente shared audiences devoted to the workings of the human body Anatomy Live Performance and the Operating Theatre a remarkable consideration of new developments on the stage as well as in contemporary writings of theorists such as Donna Haraway and Brian Massumi turns our modern notions of the dissecting table on its head using anatomical theatre as a means of obtaining a fresh perspective on representations of the body conceptions of subjectivity and own knowledge about science and the stage Critically dissecting well known exhibitions like Body Worlds and The Visible Human Project and featuring contributions from a number of diverse scholars on such subjects as the construction of spectatorship and the implications of anatomical history Anatomy Live is not to be missed by anyone with an interest in this engaging intersection of science and artistic practice
