

Single-Input-Output Neurons

Linear Output Neurons

Linear neurons are the simplest type of neurons. They are called "linear" because they have a single input and a single output. They are called "output" because they are used to produce a single output value. They are called "neurons" because they are the basic building blocks of a neural network.

Neurons are represented by the following equation:

Neurons are represented by the following equation: $y = w \cdot x + b$, where y is the output, w is the weight, x is the input, and b is the bias. This equation is the basic building block of a neural network. It is used to calculate the output of a neuron given its input and weights.

Murphy,Anthony Atala,2016-11-30 Miniaturization in the fields of chemistry and molecular biology has resulted in the lab on a chip Such systems are micro fabricated devices capable of handling extremely small fluid volumes facilitating the scaling of single or multiple lab processes down to a microchip sized format The convergence of lab on a chip technology with the field of cell

biology facilitated the development of organ on a chip systems. Such systems simulate the function of tissues and organs having the potential to bypass some cell and animal testing methods. These technologies have generated high interest as applications for disease modeling and drug discovery. This book, edited by Drs Sean Murphy and Anthony Atala, provides a comprehensive coverage of the technologies that have been used to develop organ on a chip systems. Known leaders cover the basics to the most relevant and novel topics in the field including micro fabrication, 3D bio printing, 3D cell culture techniques, biosensor design and microelectronics, micro fluidics, data collection and predictive analysis. The book describes specific tissue types amenable for disease modeling and drug discovery applications: Lung, liver, heart, skin and kidney on a chip. Technologies are included as well as a progress report on designing an entire body on a chip system. Additionally, the book covers applications of various systems for modeling tissue specific cancers, metastasis and tumor microenvironments and provides an overview of current and potential applications of these systems to disease modeling, toxicity testing and individualized medicine.

Detection of Non-Amplified Genomic DNA Giuseppe Spoto, Roberto Corradini, 2012-07-06

This book offers an overview of state of the art in non amplified DNA detection methods and provides chemists, biochemists, biotechnologists and material scientists with an introduction to these methods. In fact, all these fields have dedicated resources to the problem of nucleic acid detection, each contributing with their own specific methods and concepts. This book will explain the basic principles of the different non amplified DNA detection methods available, highlighting their respective advantages and limitations. Non amplified DNA detection can be achieved by adopting different techniques. Such techniques have allowed the commercialization of innovative platforms for DNA detection that are expected to break into the DNA diagnostics market. The enhanced sensitivity required for the detection of non amplified genomic DNA has prompted new strategies that can achieve ultrasensitivity by combining specific materials with specific detection tools. Advanced materials play multiple roles in ultrasensitive detection. Optical and electrochemical detection tools are among the most widely investigated to analyze non amplified nucleic acids. Biosensors based on piezoelectric crystal have been also used to detect unamplified genomic DNA. The main scientific topics related to DNA diagnostics are discussed by an outstanding set of authors with proven experience in this field.
