

# EVIDENCES OF EVOLUTION LAB

**I. PURPOSE:** What are the 6 Evidences of Evolution?

**BACKGROUND:** Evidence has been found to indicate that living things have changed gradually during their natural history. The studies of fossils as well as embryology, biochemistry, anatomy, geographic distribution and current observations of natural selection provide evidence for evolution.

**II. MATERIALS:** Copy of Figure 1, copy of Table 1, copy of Table 2, copy of Table 3

**III. PROCEDURES:**

Attach Figure 1, Table 1 and Table 2 in your Data and Observations section. Then read through each section of the INSTRUCTIONS and complete tables or answer questions as instructed. Record table information in the DATA and OBSERVATIONS section of your lab. After answering questions 1-19, complete Table 3 and attach in the Questions section before completing the Discussion and Conclusion.

## INSTRUCTIONS:

### SECTION 1 : EVIDENCE FROM COMPARATIVE ANATOMY

By comparing anatomical structures, evolutionary links can be established between groups of organisms. These comparisons include examining Homologous Structures, Analogous Structures and Vestigial Structures.

#### a. HOMOLOGOUS STRUCTURES

The structures in FIGURE 1 are *formed* in similar ways during embryonic development and share like arrangements: however, they have somewhat different forms and functions. They are called homologous structures.

1. Carefully examine the drawings of the bones in FIGURE 1. Look for *similarities* among among the various animals. **COLOR** each part of the human arm a different color. Color all the bones of the wrist another color and the bones of the phalanges (fingers) yet another color. Then **color** the corresponding bone in each of the other animals the same color as those in the human bone. Attach FIGURE 1 in your Data and Observations Section
2. In Table 1, describe the function of the phalanges (fingers) of each set of bones.
3. Answer questions 1 and 2.

#### b. ANALOGOUS STRUCTURES

Some apparently unrelated animals have organs with similar function, yet are very different in structure and form. These structures are called analogous structures.

1. Examine FIGURE 2 of the moth wing and the bat wing. Answer questions 3-5.

## **Lab Evidence For Evolution:**

Evidence for God William A. Dembski, Michael R. Licona, 2010-07-01 There have always been challenges to belief in God as he is revealed in the Bible and each new year seems to add more questions to the doubter's arsenal In Evidence for God leading apologists provide compelling arguments that address the most pressing questions of the day about God science Jesus the Bible and more including Is Intelligent Design really a credible explanation of the origins of our world Did Jesus really exist Is Jesus really the only way to God What about those who have never heard the gospel Is the Bible today what was originally written What about recently publicized gospels that aren't in the Bible and much more **Increasing Student**

**Comprehension of Evolution Through Laboratory Investigations and Simulations** Steven W. McClintock, 2008

**Nothing Created Everything** Ray Comfort, 2009 Richard Dawkins is arguably the modern poster boy for Charles Darwin However a key difference radically separates the two men Darwin believed in the existence of God and calls God the Creator seven times in The Origin of Species Dawkins in contrast claims The more you understand the significance of evolution the more you are pushed towards atheism It seems Professor Dawkins thinks Charles Darwin didn't understand his own theory Just months after the 2009 discovery of the supposed missing link author Ray Comfort turns the tables on evolutionists In Nothing Created Everything he examines the evidence for evolution and shows it is lacking He demonstrates that when it comes to explaining how life began atheists and evolutionists offer faith not facts Ironically atheists insist nothing created everything a scientific impossibility In a conversational tone Comfort speaks to both atheists and believers and urges this discussion be based on hard evidence And when it is he insists people will realize evolution is a theory that can't be tested or measured and therefore can't be scientific **The Molecular Life of Diatoms** Angela Falciatore, Thomas Mock, 2022-05-11

Diatoms are the most species rich group of algae and they contribute about 20% of annual global carbon fixation They play major roles in ocean food webs and global biogeochemical cycles They are also a target of the biotechnology industry because of their nano patterned silica cell wall and high lipid content Diatoms have received increasing attention as more genomes became available and because of the development of genome editing tools such as the CRISPR Cas9 technology which has made diatoms as genetically tractable as well established biological model species This book provides an overview on diatom molecular biology It brings together international leading experts in the field to discuss the latest data and developments from genes to ecosystems As the understanding of diatoms is currently experiencing a step change it is critical to allow for synergistic approaches on diverse aspects of diatom biology and evolution The book offers fundamental insights into the molecular life of diatoms at the same time new scientific concepts are developed based on the application of the latest molecular tools and genomic information to explore the fascinating lifestyle of diatoms Exploring Physical

**Evolution ,** *Improving the proof: Evolution of and emerging trends in impact assessment methods and approaches in agricultural development* Mywish K. Maredia, Assessing impacts of public investments has long captured the interest and attention of the development community This paper presents the evolution of different methods and approaches used for ex ante appraisal monitoring project evaluation and impact assessment over the last five decades Among these tools impact assessment IA conducted retrospectively comes closest to providing the proof of development effectiveness It is defined as the systematic analysis of the significant or lasting changes in people s lives brought about by a given action or series of actions in relation to a counterfactual There are three basic types of retrospective IAs macro level IAs that focus on the contribution of developmental efforts to an impact goal aggregated at a sector or a system level micro level impact evaluations IEs concerned with estimating the average effect of an intervention on outcomes at the beneficiary level and micro level ex post impact analysis concerned with total effects of a development effort after the outputs are scaled up Ex post IAs have evolved and expanded over the decades in both breadth and depth of analysis in response to evolving development themes and methodological advancements The increased emphasis on learning from evaluations has also seen responses from both quantitative and qualitative camps of the evaluation community The paper argues that generation of robust knowledge that feeds into making developmental policies and investment decisions requires a hierarchical and cumulative approach to improving the proof through rigorous and a variety of impact assessment methods applied incrementally at the project program and system level Subjecting as many development interventions as resources allow to rigorous impact assessment based on a common framework can help build a critical body of evidence on impacts of development interventions which can then be subjected to meta analyses to help assimilate results across different studies and build a knowledge base on what works and what does not

Defending the Faith Henry Morris, 1999-09 When Jude wrote his Epistle he implored believers in all ages to be diligent in their defense of the faith And the faith clearly was and is belief in Jesus Christ as Creator and Redeemer So just as Solomon assured us that there is nothing new under the sun we're not surprised that there are attacks on the gospel today Jude was just as familiar with these enemies of the gospel in his time Now author Henry Morris offers up a brand new look at these age old attacks on the faith tackling a breathtaking range of issues from science and the Bible to liberal criticisms of the Bible A powerful weapon in the battle for truth Defending the Faith doesn't shrink from the fight but rather speaks the truth in love

*Evolution Education Re-considered* Ute Harms, Michael J. Reiss, 2019-07-16 This collection presents research based interventions using existing knowledge to produce new pedagogies to teach evolution to learners more successfully whether in schools or elsewhere Success here is measured as cognitive gains as acceptance of evolution or an increased desire to

continue to learn about it. Aside from introductory and concluding chapters by the editors, each chapter consists of a research-based intervention intended to enable evolution to be taught successfully. All these interventions have been researched and evaluated by the chapters' authors, and the findings are presented along with discussions of the implications. The result is an important compendium of studies from around the world conducted both inside and outside of school. The volume is unique and provides an essential reference point and platform for future work for the foreseeable future.

**Evolution Challenges** Karl S. Rosengren, Sarah K. Brem, E. Margaret Evans, Gale M. Sinatra, 2012-04-23. A recent poll revealed that one in four Americans believe in both creationism and evolution, while 41% believe that creationism is true and evolution is false. A minority, only 13%, believe only in evolution. Given the widespread resistance to the idea that humans and other animals have evolved, and given the attention to the ongoing debate of what should be taught in public schools, issues related to the teaching and learning of evolution are quite timely. *Evolution Challenges: Integrating Research and Practice in Teaching and Learning about Evolution* goes beyond the science versus religion dispute to ask why evolution is so often rejected as a legitimate scientific fact, focusing on a wide range of cognitive, socio-cultural, and motivational factors that make concepts such as evolution difficult to grasp. The volume brings together researchers with diverse backgrounds in cognitive development and education to examine children's and adults' thinking, learning, and motivation, and how aspects of representational and symbolic knowledge influence learning about evolution. The book is organized around three main challenges inherent in teaching and learning evolutionary concepts: folk theories and conceptual biases, motivational and epistemological biases, and educational aspects in both formal and informal settings. Commentaries across the three main themes tie the book together thematically, and contributors provide ideas for future research and methods for improving the manner in which evolutionary concepts are conveyed in the classroom and in informal learning experiences. *Evolution Challenges* is a unique text that extends far beyond the traditional evolution debate and is an invaluable resource to researchers in cognitive development, science education, and the philosophy of science, science teachers, and exhibit and curriculum developers.
