Digital Electronics and Laboratory Computer Experiments Charles Wilkins, 2012-12-06 Science undergraduates have come to accept the use of computers as commonplace The daily use of portable sophisticated electronic calculators some of them rivaling general purpose minicomputers in their capabilities has hastened this development Over the past several years computer assisted experimentation has assumed an important role in the experimental laboratory Mini and microcomputer systems have become an important part of the physical scientist's array of analytical instruments Prompted by our belief that this was an inevitable development we began several years ago to develop the curricular materials presented in this manual At the outset several objectives seemed important to us First insofar as possible the experiments included should be thoroughly tested and error free Second they should be compatible with a variety of laboratory computer data acquisition and control systems Third little or no previous background in either electronics or programming should be necessary Of course such background would be advantageous To satisfy these objectives we decided to adopt a widespread high level computer language BASIC suitably modified for the purpose Furthermore we have purposely avoided specifying any particular system or equipment Rather the functional characteristics of both hardware and software required are stipulated The experiments have been developed using Varian 620 and Hewlett Packard 2100 series computers but we believe they are readily transferable to other commonly available computer systems with a minimum of difficulty
