

Objectives

upon completion of this chapter, you will be able to:

1. Understand various operating costs of a power system.
2. Determine the load sharing between different generators for minimum cost dispatch.

Introduction

The efficient and optimum economic operation of electric power generation systems has occupied an important position in the electric power industry. Economic operation is very important for a power system to return a profit on the capital invested.

The optimum operation of the system involves the consideration of economy of operation, system security, emissions at a certain fossil-fuel plants. The hydrothermal coordination problem is another optimum operating problem area that has received a great deal of attention. Another factor that influences the power generation at minimum cost is transmission losses.

The most efficient generator in the system does not guarantee minimum cost as it may be located in an area where fuel cost is high. Also, if the plant is located far from the load centre, transmission loss may be higher, and hence the plant may be uneconomical.

The basic objective is to determine the generation of different plants, such that total operating cost is minimum. The operating cost plays an important role in economic scheduling.

Generator Operating Cost

The total generation cost includes fuel, labour, and maintenance costs. In case of economic load dispatch, the generations are not fixed, but they are allowed to take values within certain allowable limits so as to meet a particular load demand with minimum fuel consumption. The total cost of generation is a function of the individual generation of the sources, which can take values within certain constraints; the cost of generation will depend on system constraints for a particular load demand. In this section, we will only consider fuel costs because other costs cannot be optimised based on generation.

We usually express instead of cost (P_g), input energy rate $F(P_g)$ [Mkcal/h] because fuel cost may change daily/monthly.

Heat rate curve $H(P_g)$ is heat energy in Mkcal need to generate one unit of electrical energy (kWh). Based on experimental data for a plant the heat rate curve is plotted in Figure 3.1.

Data Science and Applications for Modern Power Systems Le Xie, Yang Weng, Ram Rajagopal, 2023-06-20 This book offers a comprehensive collection of research articles that utilize data in particular large data sets in modern power systems operation and planning As the power industry moves towards actively utilizing distributed resources with advanced technologies and incentives it is becoming increasingly important to benefit from the available heterogeneous data sets for

improved decision making The authors present a first of its kind comprehensive review of big data opportunities and challenges in the smart grid industry This book provides succinct and useful theory practical algorithms and case studies to improve power grid operations and planning utilizing big data making it a useful graduate level reference for students faculty and practitioners on the future grid *Data Analytics-Based Demand Profiling and Advanced Demand Side Management for Flexible Operation of Sustainable Power Networks* Jelena Ponoćko,2020-01-27 This thesis deals with two important and very timely aspects of the future power system operation assessment of demand flexibility and advanced demand side management DSM facilitating flexible and secure operation of the power network It provides a clear and comprehensive literature review in these two areas and states precisely the original contributions of the research The book first demonstrates the benefits of data mining for a reliable assessment of demand flexibility and its composition even with very limited observability of the end users It then illustrates the importance of accurate load modelling for efficient application of DSM and considers different criteria in designing DSM programme to achieve several objectives of the network performance simultaneously Finally it demonstrates the importance of considering realistic assumptions when planning and estimating the success of DSM programs The findings presented here have both scientific and practical significance they gained her BSc and MSc degrees in electrical engineering from the University of Belgrade in 2011 and 2012 respectively She graduated with her PhD from the University of Manchester She has presented at several conferences and has won runner up prizes in poster presentation at three She has authored or co authored more than 40 journal conference and technical papers provide a basis for further research and can be used to guide future applications in industry Distributed Control Applications Alois Zoitl,Thomas Strasser,2017-12-19 Distributed Control Applications Guidelines Design Patterns and Application Examples with the IEC 61499 discusses the IEC 61499 reference architecture for distributed and reconfigurable control and its adoption by industry The book provides design patterns application guidelines and rules for designing distributed control applications based on the IEC 61499 reference model Moreover examples from various industrial domains and laboratory environments are introduced and explored Handbook Of Renewable Energy Technology Ahmed F Zobaa,Ramesh C Bansal,2011-01-26 Effects of environmental economic social political and technical factors have led to the rapid deployment of various sources of renewable energy based power generation The incorporation of these generation technologies have led to the development of a broad array of new methods and tools to integrate this new form of generation into the power system network This book arranged into six sections highlights various renewable energy based generation technologies and consists a series of papers written by experts in their respective fields of specialization The Handbook of Renewable Energy Technology will be of great practical benefit to professionals scientists and researchers in the relevant industries and will be of interest to those of the general public wanting to know more about renewable energy technologies Data Processor ,1972 Handbook of Networks in Power Systems I Alexey Sorokin,Steffen Rebennack,Panos M. Pardalos,Niko A.

Iliadis, Mario V. F. Pereira, 2012-03-01 Energy has been an inevitable component of human lives for decades. Recent rapid developments in the area require analyzing energy systems not as independent components but rather as connected interdependent networks. The Handbook of Networks in Power Systems includes the state of the art developments that occurred in the power systems networks in particular gas electricity liquid fuels freight networks as well as their interactions. The book is separated into two volumes with three sections where one scientific paper or more are included to cover most important areas of networks in power systems. The first volume covers topics arising in electricity network in particular electricity markets smart grid network expansion as well as risk management. The second volume presents problems arising in gas networks such as scheduling and planning of natural gas systems pricing as well as optimal location of gas supply units. In addition, the second volume covers the topics of interactions between energy networks. Each subject is identified following the activity on the domain and the recognition of each subject as an area of research. The scientific papers are authored by world specialists on the domain and present either state of the arts reviews or scientific developments. **PICA Conference Proceedings**, 1979 **IEEE Conference Proceedings**, 1979 **Energy Research Abstracts**, 1992 **Energy**, 1983 **Westinghouse Engineer**, 1964 **Directory of Energy Information Administration Models (1992)** DIANE Publishing Company, **Catalog of Copyright Entries.
