Analogical Thinking in Architecture Jean-Pierre Chupin,2023-07-27 This book provides an in depth exploration of the rich and persistent use of analogical thinking in the built environment Since the turn of the 21st century design thinking has permeated many fields outside of the design disciplines It is expected to succeed whenever disciplinary boundaries need to be transcended in order to think outside the box This book argues that these qualities have long been supported by analogical thinking an agile way of reasoning in which think the unknown through the familiar The book is organized into four case studies the first reviews analogical models that have been at the heart of design thinking representations from the 1960s to the present day the second investigates the staying power of biological analogies the third explores the paradoxical imaginary of analogous cities as a means of integrating contemporary architecture with heritage contexts while the fourth unpacks the critical and theoretical potential of linguistic metaphors and visual comparisons in architectural discourse Comparing views on the role of analogies and metaphors by prominent voices in architecture and related disciplines from the 17th century to the present the book shows how the analogical world of the project is revealed as a wide open field of creative and cognitive interactions These visual and textual operations are explained through 36 analogical plates which can be read as an inter text demonstrating how analogy has the power to reconcile design and theories

Use Matters Kenny Cupers,2013-10-15 From participatory architecture to interaction design the question of how design accommodates use is driving inquiry in many creative fields Expanding utility to embrace people s everyday experience brings new promises for the social role of design But this is nothing new As the essays assembled in this collection show interest in the elusive realm of the user was an essential part of architecture and design throughout the twentieth century Use Matters is the first to assemble this alternative history from the bathroom to the city from ergonomics to cybernetics and from Algeria to East Germany It argues that the user is not a universal but a historically constructed category of twentieth century modernity that continues to inform architectural practice and thinking in often unacknowledged ways
