Manual of Forensic Taphonomy James T. Pokines, Ericka N. L'Abbe, Steven A. Symes, 2021-12-30 The main goals in any forensic skeletal analysis are to answer who is the person represented individualization how that person died trauma pathology and when that person died the postmortem interval or PMI The analyses necessary to generate the biological profile include the determination of human nonhuman or nonosseous origin the minimum number of individuals represented age at death sex stature ancestry perimortem trauma antemortem trauma osseous pathology odontology and taphonomic effects the postmortem modifications to a set of remains The Manual of Forensic Taphonomy Second Edition covers the fundamental principles of these postmortem changes encountered during case analysis Taphonomic processes can be highly destructive and subtract information from bones regarding their utility in determining other aspects of the biological profile but they also can add information regarding the entire postmortem history of the remains and the relative timing of those effects The taphonomic analyses outlined provide guidance on how to separate natural agencies from human caused trauma These analyses are also performed in conjunction with the field processing of recovery scenes and the interpretation of the site formation and their postdepositional history The individual chapters categorize these alterations to skeletal remains illustrate and explain their significance and demonstrate differential diagnosis among them Such observations may then be combined into higher order patterns to aid forensic investigators in determining what happened to those remains in the interval from death to analysis including the environments in which the remains were deposited including buried terrestrial surface marine freshwater or cultural contexts Features Provides nearly 300 full color illustrations of both common and rare taphonomic effects to bones derived from actual forensic cases Presents new research including experimentation on recovery rates during surface search timing of marine alterations trophy skulls taphonomic laboratory and field methods laws regarding the relative timing of taphonomic effects reptile taphonomy human decomposition and microscopic alterations by invertebrates to bones Explains and illustrates common taphonomic effects and clarifies standard terminology for uniformity and usage within in the field While the book is primarily focused upon large vertebrate and specifically human skeletal remains it effectively synthesizes data from human ethological geological paleontological paleoanthropological archaeological artifactual and zooarchaeological studies Since these taphonomic processes affect other vertebrates in similar manners The Manual of Forensic Taphonomy Second Edition will be invaluable to a broad set of forensic and investigative disciplines **Taphonomy of Human Remains** Eline M. J. Schotsmans, Nicholas Márquez-Grant, Shari L.

Forbes, 2017-04-17 A truly interdisciplinary approach to this core subject within Forensic Science Combines essential theory with practical crime scene work Includes case studies Applicable to all time periods so has relevance for conventional archaeology prehistory and anthropology Combines points of view from both established practitioners and young researchers to ensure relevance Cremains, what remains Tristan Krap, 2022-05-19 Salvaging burned human remains can be a

challenging task for the forensic specialists and interpreting evidence from thermally altered skeletal elements can be difficult. Based on the findings of latest research, more is possible than was previously known. In this publication, novel ways of finding and analyzing burned human remains are presented to the field of specifically forensic anthropology. The reader is introduced to new methods to collect and differentiate cremated bone from construction debris from a fire scene and estimate the exposure temperature that bones have been exposed to. All an important part of the forensic investigation. Further, this book provides the reader with new knowledge on heat-induced bio-physical changes and characteristics that aids the interpretation of skeletal damage that occurred before, during, or after the fire. Importantly, new methods for forensic practice should comply to legal standards. The value of the presented methods for practice in both the field and the courtroom is thoroughly discussed to inform both the forensic practitioner as well as the legal experts.

Forensic Taphonomy and Ecology of North American Scavengers Susan N. Sincerbox, Elizabeth A. DiGangi, 2017-11-15

Forensic Taphonomy and Ecology of North American Scavengers compiles research on vertebrate scavenging behavior from numerous academic fields including ecology and forensic anthropology. Scavenging behavior can displace remains from their depositional context, confound postmortem interval estimation, destroy osteological markers, and inflict damage that mimics or disguises perimortem trauma. Consequently, the actions of vertebrate scavengers can significantly impact the medicolegal investigation of human remains. It is therefore critical when interpreting a death scene and its associated evidence that scavenging be recognized and the possible effects of scavenging behavior considered. This book is an ideal reference for both students and medicolegal professionals serving as a field manual for the identification of common scavenging species known to modify human remains in North America. In addition, this book presents a framework to guide investigators in optimizing their approach to scavenged cases, promoting more complete recovery of human remains and the accuracy of forensic reconstructions of peri and postmortem events. Examines scavenging behavior through an evolutionary and ecological lens, integrating research from diverse fields. Includes brief summaries of the taphonomic signatures and ecological contexts of common or well-studied North American scavenging taxa. Proposes strategies to maximize the recovery of vertebrate scavenged human remains and improve forensic reconstructions of peri and postmortem events.
